Consumer prices and price indexes

January-March 1989

Prix à la consommation et indices des prix

Janvier-mars 1989

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

| | | | |
|------------|------------|-----------|------------|
| St. John's | (772-4073) | Winnipeg | (983-4020) |
| Halifax | (426-5331) | Regina | (780-5405) |
| Montréal | (283-5725) | Edmonton | (495-3027) |
| Ottawa | (951-8116) | Calgary | (292-6717) |
| Toronto | (973-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9606) ou au centre de consultation de Statistique Canada à:

| | | | |
|------------|------------|-----------|------------|
| St. John's | (772-4073) | Winnipeg | (983-4020) |
| Halifax | (426-5331) | Regina | (780-5405) |
| Montréal | (283-5725) | Edmonton | (495-3027) |
| Ottawa | (951-8116) | Calgary | (292-6717) |
| Toronto | (973-6586) | Vancouver | (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . Barbara J. Slater, Director,
Prices Division
- . J. Arthur Ridgeway, Chief,
Consumer Prices Section
- . Harold Harnarine, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

HIGHLIGHTS

Consumer Price Behaviour

First Quarter, 1989

Trends in the All-items Index

Between December 1988 and March 1989 (first quarter) the All-items Consumer Price Index (CPI) advanced by 1.4% seasonally adjusted. This was noticeably faster than the increases of 1.1% and 1.0% registered in each of the two previous quarters, ending in September and December, 1988 respectively. The seasonally-adjusted monthly rates rose from 0.4% in January to 0.5% in each of February and March.

In unadjusted terms, the All-items index rose by 1.6% in the first quarter 1989, compared to a 0.8% increase in the fourth quarter, 1988. The annual rate of increase, as measured by the average of the 12-month changes for the three months of the first quarter, 1989 was 4.6%, considerably faster than the 4.1% posted in the fourth quarter, 1988.

Major Contributors to the First Quarter Change

As indicated, the All-items index advanced by 1.6% in unadjusted terms between December 1988 and March 1989 (first quarter). This resulted from a relatively rapid 2.1% increase in the Food index, combined with a 1.5% rise in the All-items excluding Food index.

In addition the rise in the Food index, all the remaining six major components posted advances, ranging from 0.7% to 2.7%. The largest impact on the latest rise in the All-items index resulted from a 1.5% increase in the Housing index. In rank order, this was followed by the 2.1% increase in Food. In third and fourth place respectively were the increases of 1.7% and 2.7%, registered by the Transportation and Clothing indexes. Increases in the other major component indexes contributed negligibly to the rise in the All-items index in the latest quarter.

A large proportion of the 1.5% advance in the Housing index was attributable to an increase of 1.9% in the Owned Accommodation index. This latter index was fueled by relatively sharp increases in its mortgage interest cost and new house components. The Rented Accommodation index was up by 1.0%, contributing less markedly to the advance in the Housing index. The impact resulting from higher rates for electricity, fuel oil and water was very evident as well. Less conspicuous price increases were registered for postal services, child care services, pet food, paper and plastic products, horticultural goods, household textiles and selected household equipment. At the same time, long-distance telephone charges fell by 3.0% and furniture prices declined by 1.0%.

The 2.1% increase in the Food index resulted from advances of 2.3% in the Food Purchased from Stores index and 1.3% in the index for Food Purchased from Restaurants. A considerable part of the rise in the prices of food from grocery stores was traced to noticeable price hikes for fresh vegetables, chicken and carbonated beverages. The Fresh Fruit index rose by 1.3%, as higher prices for reduced supplies of bananas and apples were dampened substantially by seasonally lower prices for citrus fruits. Moderate price increases were also observed for beef, selected dairy and bakery products and coffee.

FAITS SAILLANTS

Comportement des prix à la consommation

Premier trimestre, 1989

Tendances de l'indice d'ensemble

Entre décembre 1988 et mars 1989 (premier trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation a augmenté de 1.4%. Cette augmentation est sensiblement supérieure à celles de 1.1% et 1.0% observées au cours des deux trimestres précédents se terminant respectivement en septembre et en décembre 1988. Les taux de variations mensuels désaisonnalisés sont passés de 0.4% en janvier à 0.5% en février et en mars.

L'indice d'ensemble non désaisonnalisé s'est accru de 1.6% au cours du premier trimestre de 1989, comparativement à l'augmentation de 0.8% enregistrée au quatrième trimestre de 1988. Le taux de progression annuel, établi à partir de la moyenne des variations sur douze mois pour les trois mois du premier trimestre de 1989, s'est élevé à 4.6%, soit un taux considérablement plus élevé que celui de 4.1% enregistré au quatrième trimestre de 1988.

Principaux facteurs de la variation au premier trimestre

Comme il a été noté plus haut, l'indice d'ensemble non désaisonnalisé a progressé de 1.6% entre décembre 1988 et mars 1989 (premier trimestre). Cette augmentation résulte d'une hausse relativement marquée de 2.1% de l'indice des aliments et d'une hausse de 1.5% de l'indice d'ensemble sans les aliments.

À l'augmentation de l'indice des aliments, s'ajoutent dans le cas des six autres composantes principales des augmentations allant de 0.7% à 2.7%. La hausse qui a contribué le plus à l'augmentation de l'indice d'ensemble est celle de l'indice de l'habitation, soit 1.5%. En ordre d'importance, cette hausse est suivie de l'augmentation de 2.1% de l'indice des aliments. Au troisième et quatrième rangs viennent l'augmentation de l'indice des transports (1.7%) et celle de l'indice de l'habillement (2.7%). La hausse des autres composantes principales des indices a peu contribué à l'augmentation de l'indice d'ensemble au cours du dernier trimestre.

Une bonne partie de la hausse de 1.5% de l'indice de l'habitation est la conséquence de l'augmentation de 1.9% de l'indice du logement en propriété, dont une grande partie est due aux hausses substantielles des coûts des intérêts hypothécaires et de la composante des maisons neuves. L'indice du logement en location a augmenté de 1.0% et a eu une incidence moindre sur la hausse de l'indice de l'habitation. L'augmentation des taux de l'électricité, du mazout et de l'eau a aussi influencé l'indice de façon notable. Les frais postaux, les services de garde d'enfants, les aliments pour animaux, les produits en papier et en plastique, les produits horticoles, les articles ménagers en matière textile et les articles d'équipement ménager ont enregistré des augmentations moins fortes. Les frais d'appel interurbains ont diminué de 3.0% et le prix des meubles de 1.0%.

L'indice des aliments a augmenté de 2.1% principalement à cause d'une hausse de 2.3% de l'indice des aliments achetés au magasin et de l'augmentation de 1.3% de l'indice des aliments achetés au restaurant. Une part substantielle de la hausse des prix des aliments dans les épiceries est attribuable à une forte hausse des prix des légumes frais, de la volaille et des boissons gazeuses. L'indice des fruits frais a augmenté de 1.3%, l'augmentation des prix des bananes et des pommes due à un approvisionnement réduit ayant été largement compensé par la baisse saisonnière des prix des agrumes. Une légère augmentation des prix a été observée pour le bœuf, certains produits laitiers et de boulangerie et le café.

The Transportation index advanced by 1.7%, due in large measure, to a rise of 12.6% in the Public Transportation index. The latter was heavily influenced by a rise of 25.6% in air-fares, some of which was of a seasonal nature. The Private Transportation index rose by 0.7%, due mainly to advances in gasoline prices, in rental charges for automobiles and in automobile insurance premiums. Prices of new autos fell marginally.

Increases of 3.2% in the Women's Wear index and 2.7% in the Men's Wear index were largely responsible for the 2.7% rise in the Clothing index. Higher prices for coats, dresses, sportswear and foundation garments explained the rise in the Women's Wear index. Higher prices for coats and suits accounted for the rise in the Mens' Wear index.

Increases of 1.1% in the Tobacco Products and Alcoholic Beverages index, 0.7% in the Recreation, Reading and Education index and 1.2% in the Health and Personal Care index added marginally to the explanation of the latest rise in the All-items index. Most of the rise in the first index was due to higher prices for alcoholic beverages. The second index reflected higher prices for selected recreational equipment, newspapers and magazines. The third rose in response to higher prices, mostly for prescribed medicines, selected personal care supplies and hair-grooming services.

L'indice des transports a augmenté de 1.7% à la suite d'une hausse de 12.6% de l'indice des transports publics qui s'explique par la hausse de 25.6% des tarifs aériens dont certains sont de nature saisonnière. La hausse de 0.7% de l'indice des transports privés est attribuable en majeure partie à l'augmentation des prix de l'essence, des frais de location d'automobiles et des primes d'assurance-automobile. Le prix des automobiles neuves a légèrement diminué.

Les hausses de 3.2% de l'indice des vêtements pour femmes et de 2.7% de l'indice des vêtements pour hommes ont principalement contribué à la hausse de 2.7% de l'indice de l'habillement. Une majoration du prix des manteaux, des robes, des vêtements de sport et de base explique la hausse de l'indice des vêtements pour femmes. Une majoration des prix des manteaux et des complets pour hommes explique la hausse de l'indice des vêtements pour hommes.

L'augmentation de 1.1% de l'indice des produits du tabac et des boissons alcoolisées ainsi que la hausse de 0.7% de l'indice des loisirs, lecture et formation et celle de 1.2% de l'indice de santé et des soins personnels ont contribué, de façon marginale, à la hausse de l'indice d'ensemble. Dans le cas du premier indice, l'augmentation des prix des boissons alcoolisées explique la hausse. Dans le cas du deuxième indice, celle-ci s'explique par la hausse des prix du matériel de loisirs, des journaux et des revues. La hausse du troisième indice s'explique par une augmentation des prix, en particulier ceux des médicaments sur ordonnance, des produits de soins personnels et des services de coiffeur.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n^o 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

| December - Décembre | | | | | | | | | |

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Analytical Consumer Price Index Series for Owned Accommodation

Introduction

This note describes an updating of the analytical indexes of consumer prices based on different treatments of owned accommodation. The analytical series, which have previously been published for the period from 1982 to 1987, are here updated for the year 1988. All subsequent publications of these series will, like this one, update the analytical series to the end of the last calendar year completed.

Altogether there are seven different analytical indexes for owned accommodation, based on variants of four different concepts, including one series based on the concept used in the official Consumer Price Index (CPI). Indexes are also calculated for higher level aggregates, including the All-items CPI. All analytical series are Laspeyres indexes with a 1982 base period, including the official concept series. The analytical series based on the official concept therefore match the monthly movement of the corresponding official CPI series only from January 1985 forward, the first month for which the movement of the official CPI is based on a 1982 basket.

The next section provides brief definitions of the concepts on which the analytical series are based. For more detailed descriptions of these concepts, and a discussion of the weighting and estimation of the analytical indexes themselves, the reader should consult the original publication of these series.¹

This is the last updating that will use a 1982 basket; in conformity with the official CPI, the analytical series, when they are updated for 1989, will be based on a 1986 basket. At that time, Prices Division intends to discontinue the indexes based on the concept net purchase including interest. It was originally calculated because the homeownership component of the American CPI was based on a similar methodology, so it allowed Canadian and U.S. rates of consumer price change to be compared using a common homeownership concept. But the series no longer has a role in terms of providing meaningful international comparison: The U.S. CPI for All Urban Consumers has been based on a rental equivalence approach from 1983 forward and the U.S. CPI for Urban Wage Earners and Clerical Workers from 1985 forward. If the reader requires a CPI based on the net purchase approach that includes credit payments, he should use the net purchase series based on downpayments and discounted mortgage payments, which will still be calculated after the updating to a 1986 basket.

From Jan Mich 89

¹ See the supplement in the October-December issue of *Consumer Prices and Price Indexes* (Catalogue 62-010) for 1985. That supplement and this note were written by Andrew Baldwin of Central Research Section, Prices Division. Enquiries concerning these series should be addressed to him at the 13th Floor, Section D-2, Jean Talon Building, Ottawa K1A 0T6.

Séries analytiques d'indices de prix à la consommation pour le logement en propriété

Introduction

Dans les lignes qui suivent, le lecteur trouvera une mise à jour des indices analytiques de prix à la consommation fondés sur différentes méthodes de traitement du logement en propriété. Les séries analytiques publiées ici vont jusqu'en 1988, alors que les séries publiées auparavant allaient de 1982 à 1987. Les prochaines séries qui seront publiées constitueront, comme en l'occurrence, des mises à jour des séries analytiques allant jusqu'à la fin de la dernière année civile complète.

Il y a en tout sept indices analytiques distincts pour le logement en propriété fondés sur des variantes de quatre concepts distincts, dont une série fondée sur le concept utilisé dans l'indice des prix à la consommation (IPC) officiel. Des indices sont également calculés pour des agrégats de niveau supérieur, y compris des indices au niveau de l'Ensemble. Toutes les séries analytiques, y compris celles reposant sur le concept officiel, sont des indices de Laspeyres dont la période de base est 1982. Par conséquent, les séries analytiques fondées sur le concept officiel n'affichent le même mouvement mensuel que les séries correspondantes de l'IPC officiel qu'à partir de janvier 1985, premier mois pour lequel le mouvement de l'IPC officiel a été fondé sur un panier de 1982.

La prochaine section définit brièvement les concepts ayant servi à établir les séries analytiques. Pour une description plus détaillée de ces concepts et un exposé de la pondération et de l'estimation des indices analytiques eux-mêmes, se reporter à la publication où ces séries ont paru pour la première fois.¹

C'est la dernière mise à jour qui utilisera un panier de 1982; suivant l'IPC officiel, lorsque les séries analytiques seront mises à jour pour 1989, elles seront fondées sur un panier de 1986. À ce moment, la Division des prix se propose de ne plus fonder les indices sur le concept des achats nets incluant l'intérêt. (Voir la section suivante pour un exposé de ce concept et d'autres.) À l'origine, il était calculé parce que la composante du logement en propriété de l'IPC américain était fondée sur une méthode similaire et ainsi, il permettait de comparer les taux canadiens et américains de variation des prix à la consommation en utilisant un concept commun de logement en propriété. Cependant, la série ne sert plus à établir des comparaisons internationales significatives: l'IPC américain pour tous les consommateurs urbains a été fondé sur une méthode d'équivalence en valeur locative à partir de 1983, et l'IPC américain pour les salariés des villes et les employés de bureau, à partir de 1985. Si le lecteur désire avoir un IPC fondé sur la méthode des achats nets qui inclut les paiements d'intérêt, il devrait utiliser la série des achats nets, fondée sur les paiements initiaux et les versements hypothécaires actualisés, qui sera encore calculée après la mise à jour correspondant au panier de 1986.

¹ Voir le supplément paru dans le numéro d'octobre-décembre 1985 de la publication *Prix à la consommation et indices des prix* (n° 62-010 au catalogue). Ce supplément et la présente annexe ont été rédigés par Andrew Baldwin de la Section centrale de recherche de la Division des prix. Les demandes relatives à ces séries doivent lui être adressées au 13^{ième} étage, section D-2 de l'Immeuble Jean-Talon, Ottawa K1A 0T6.

Definition of Concepts

The **official concept**, upon which the owned accommodation component of the official CPI is based, is one variant of the user cost approach. An index based on the official concept measures the changes in the cost of using a fixed stock of owned dwellings. It incorporates five main components: replacement cost of that part of the dwelling that is assumed to be used up in the year in question, mortgage interest costs, property taxes, homeowner's insurance premiums and homeowner's repairs. Other homeownership costs include transaction charges (real estate commissions, legal fees, etc.), condominium charges and mortgage insurance.

An index based on the **rental equivalence concept** measures changes in the cost of consuming the dwelling services of a fixed stock of owner-occupied homes by imputing the change in market rents on tenant-occupied dwellings. The landlord directly pays most of the expenses of a tenant-occupied dwelling, including property taxes, dwelling insurance, mortgage interest, transaction costs and most repairs. Therefore the owned accommodation series based on a rental equivalence concept contains only an equivalent rent series and series representing tenants' repairs and tenants' insurance on personal property.

An index based on the **money outlays concept** measures the price-induced changes in the consumption-related cash outlays on owner-occupied homes. Imputed costs are excluded by definition, as are investment related cash outlays. Most of the components of owned accommodation using the official concept represent cash disbursements, and are in scope under a money outlays concept, including such items as repairs, property taxes, insurance premiums and mortgage interest. The important omission from the preceding list is the replacement cost of depreciation, which is excluded as an imputed item.

In this publication, two variants of the money outlays concept are shown, one including and one excluding net equity payments. Net equity payments consist of downpayments on owner-occupied homes plus the principal portion of loan repayments when those homes are purchased on credit less sales of owner-occupied homes.

A series based on the **net purchase concept** measures changes in the current transaction prices for owned accommodation. Net purchases of owner-occupied dwellings consist of all purchases of new and existing owner-occupied dwellings by the target population less sales of such dwellings, that is, purchases of new dwellings by the target population from the non-target population.

Indexes based on three variants of the net purchase concept are shown here. The first index excludes mortgage interest. The second index has a mortgage interest weight based on the value of negotiated interest payments on net purchases of owner-occupied homes in the basket reference period. There is no discounting of the future stream of interest payments, so the mortgage interest component of the index is overweighted. The price index for mortgage interest, unlike the corresponding series in the official concept and money outlays aggregates, is the product of indexes for current house and land prices and current interest rates. The index based on the second variant is consistent with what used to be the official U.S. concept; this is the last updating of the series, which terminates with the month of December 1988. The third index includes credit payments in a better way than the discontinued second index; the single home purchase component is replaced by components for downpayments and discounted mortgage payments.

Définition des concepts

Le **concept officiel**, sur lequel repose la composante du logement en propriété de l'IPC officiel, est une variante de la méthode du coût pour l'utilisateur. Un indice fondé sur le concept officiel mesure les changements dans le coût d'utilisation d'un stock fixe de logements en propriété. Ce concept comprend cinq composantes principales: le coût de remplacement de la partie du logement qui est censée avoir été "usée" durant l'année en question, les coûts d'intérêt hypothécaire, les impôts fonciers ainsi que les primes d'assurance et les réparations à la charge du propriétaire. Les autres coûts du logement en propriété comprennent les frais de transaction (frais de courtage, honoraires d'avocat et de notaire, etc.), les charges de copropriété et l'assurance-hypothèque.

Un indice fondé sur le **concept de l'équivalence en valeur locative** permet de mesurer les variations dans le coût d'utilisation des services d'un stock fixe de logements occupés par leur propriétaire, en imputant la variation des loyers économiques de logements occupés par des locataires. Le propriétaire d'un logement locatif paie directement la plupart des dépenses, y compris les impôts fonciers, l'assurance du logement, l'intérêt hypothécaire, les frais de transaction et la plupart des réparations. Par conséquent, les seules composantes de la série du logement en propriété fondée sur le concept de l'équivalence en valeur locative sont le loyer équivalent, les réparations à la charge du locataire et l'assurance du locataire sur ses effets personnels.

Un indice fondé sur le **concept des débours** permet de mesurer les variations causées par les prix dans les débuts qu'occasionne l'utilisation de logements occupés par leur propriétaire. Les coûts imputés sont exclus par définition, de même que les débours liés à des placements. La plupart des composantes du logement en propriété reposant sur le concept officiel, notamment les réparations, les impôts fonciers, les primes d'assurance et l'intérêt hypothécaire, représentent des débours et sont donc dans le champ du concept des débours. Le grand absent de la liste est le coût de remplacement de la fraction dépréciée, qui est exclu puisqu'il s'agit d'un élément imputé.

Dans la présente publication, deux variantes du concept des débours sont présentées, la première incluant les remboursements nets sur le capital et la seconde excluant ces remboursements. Les remboursements nets sur le capital comprennent les paiements initiaux sur les logements occupés par leur propriétaire, plus la fraction des versements consacrée au remboursement du capital lorsque les logements sont achetés à crédit, moins les ventes de logements occupés par leur propriétaire.

Un indice fondé sur le **concept des achats nets** permet de mesurer les variations des prix de transaction courants pour le logement en propriété. Les achats nets de logements occupés par leur propriétaire englobent tous les achats, par la population-cible, de logements neufs et existants occupés par leur propriétaire, moins les ventes de tels logements, c'est-à-dire les achats de logements neufs par la population-cible plus les achats nets de logements existants par la population-cible auprès de la population hors cible.

Des indices fondés sur trois variantes du concept des achats nets sont présentés ici. Le premier indice exclut l'intérêt hypothécaire. Le deuxième a une pondération de l'intérêt hypothécaire fondée sur la valeur des paiements d'intérêt négociés sur les achats nets de logements occupés par leur propriétaire dans la période de référence du panier. Il n'y a pas d'actualisation de la vague future de paiements d'intérêt et, par conséquent, la composante de l'intérêt hypothécaire de l'indice est sur-pondérée. L'indice de prix pour l'intérêt hypothécaire, contrairement aux séries correspondantes du concept officiel et des agrégats des débours, est le produit des indices pour les prix courants des maisons et des terrains et pour les taux d'intérêt courants. L'indice fondé sur la deuxième variante est conforme à ce qu'était habituellement le concept officiel américain; c'est la dernière mise à jour de la série, laquelle se termine avec le mois de décembre 1988. Le troisième indice tient mieux compte des paiements d'intérêt que ne le faisait le deuxième, qui a été interrompu. En effet, la composante unique de l'achat de maisons est remplacée par les composantes des paiements initiaux et celle des versements hypothécaires actualisés.

Update on the Movement of the Analytical Indexes

The reader should refer to Text Table II, which shows the analytical owned accommodation index at the Canada level, and to Figure 1, which graphs the same series. He should also examine Text Tables III, IV and V, which show the analytical indexes for the higher level aggregates shelter, housing and All-items, respectively.

There were substantial differences between the movements of the analytical indexes for owned accommodation in 1988, with the annual series showing the growth rates ranging from 3.1% for the rental equivalence series to 8.7% for one of the net purchase series, all of which showed higher rates of increase than the other analytical series. The official index showed a 5.5% rate of increase, a higher rate than either of the money outlays indexes.

Well over half of the increase in the official series was due to a 8.6% increase in its replacement cost component and a 6.4% increase in property taxes. Although the largest increase of any major component, the replacement cost index showed a much lower increase in 1988 than in 1987, which is the main reason for the lower increase in the official owned accommodation index. The other major component of the official series is mortgage interest, which grew by 3.5%. Although house prices and mortgage rates rose substantially in 1988, it takes a while for such increases to work their way through the mortgage interest index. Just the same, the mortgage interest series increased much faster in 1988 than it did in 1987, when it grew by barely more than one percent.

The equivalent rent series showed a 3.2% increase in 1986, compared to a 4.0% increase in the CPI rent index. The difference was mainly due to higher rates of rent change in some urban centres with lower percentages of homeowners, notably Toronto, Montreal and Ottawa, while St. John's, Regina and Vancouver, which have above average percentages of homeowners, had below average rates of rent change. Also, for Toronto and Vancouver, the equivalent rent series showed a substantially lower increase than did the rent CPI.

The first money outlays index is just the official series for owned accommodation excluding replacement cost, so naturally it shows a rate of increase (4.7%) lower than that of the official series. The second money outlays index shows the same rate of increase, but the explanation is more complicated. The equity payments index shows a substantial rate of increase at 6.9%. The downpayments and sale of home indexes both grew by about 10%, but this tends to reduce the rate of change of the owned accommodation series since the sale of home index has a negative weight and is a more important component than is downpayments.

The first net purchase series is dominated by its home purchase component, which grew by 9.4% in 1986. The downpayments index in the third net purchase series shows about the same rate of increase and the mortgage payments series, a 13.3% increase. Both indexes give a greater weight to property taxes and insurance premiums (an 8.4% increase in 1988) since they lack a mortgage interest component; both show rates of increase in excess of 7%.

Mise à jour du mouvement des indices analytiques

Le lecteur est prié de se reporter au tableau explicatif II, qui illustre les indices analytiques pour le logement en propriété au niveau du Canada, et à la figure 1, qui présente un graphique pour les mêmes séries. Il devrait également examiner les tableaux explicatifs III, IV et V, où il peut trouver respectivement les plus hauts niveaux des agrégats du logement, de l'habitation et de l'ensemble.

En 1988, on relève d'importants écarts entre les mouvements des indices analytiques pour le logement en propriété, les séries annuelles ayant affiché des taux d'augmentation allant de 3.1%, pour les séries de l'équivalence en valeur locative, à 8.7%, pour l'une des séries des achats nets. Toutes ces séries ont connu des taux d'augmentation supérieurs aux autres séries analytiques. L'indice officiel a affiché un taux d'augmentation de 5.5%, soit un taux supérieur à l'un ou l'autre des indices des débours.

Bien plus de la moitié de l'augmentation des séries officielles est attribuable à une majoration de 8.6% de sa composante du coût de remplacement et à une hausse de 6.4% des impôts fonciers. Bien que l'indice du coût de remplacement ait connu l'augmentation la plus forte des composantes principales, cette hausse était beaucoup moins élevée en 1988 qu'en 1987. Ceci explique en grande partie l'augmentation plus faible de l'indice officiel du logement en propriété. L'autre composante principale des séries officielles, l'intérêt hypothécaire, a augmenté de 3.5%. Bien que le prix des maisons et les taux hypothécaires aient augmenté de façon importante en 1988, il faut un certain temps avant que ces augmentations finissent par avoir une influence sur l'indice de l'intérêt hypothécaire. De même, la série de l'intérêt hypothécaire a augmenté beaucoup plus rapidement en 1988 qu'en 1987, lorsqu'elle avait affiché une hausse à peine supérieure à un pour cent.

En 1986, la série du loyer équivalent a connu une augmentation de 3.2%, comparativement à un accroissement de 4.0% de l'indice du loyer de l'IPC. Cet écart est principalement attribuable aux taux de variation du loyer plus élevés dans certains centres urbains où les pourcentages de propriétaires sont plus bas, notamment Toronto, Montréal et Ottawa. Pour leur part, St. John's, Regina et Vancouver, où les pourcentages de propriétaires sont plus élevés que la moyenne, ont affiché des taux de variation du loyer plus bas que la moyenne. Pour Toronto et Vancouver, on a également relevé une augmentation beaucoup moins importante de la série du loyer équivalent que pour l'IPC du loyer.

Le premier indice des débours ne représente que la série officielle pour le logement en propriété excluant le coût de remplacement. Par conséquent, il affiche évidemment un taux d'augmentation plus bas que la série officielle, soit 4.7%. Le deuxième indice des débours affiche le même taux d'augmentation mais l'explication est plus complexe. Le taux d'augmentation de l'indice des remboursements sur le capital s'est accru de façon importante pour s'établir à 6.9%. Les indices des paiements initiaux et de la vente de maisons ont augmenté d'environ 10%, mais ceci tend à réduire le taux de variation de la série du logement en propriété puisque l'indice de la vente de maisons a une pondération négative et qu'il représente une composante plus importante que les paiements initiaux.

La première série des achats nets est dominée par sa composante des achats de maisons, qui a augmenté de 9.4% en 1986. L'indice des paiements initiaux de la troisième série des achats nets affiche à peu près le même taux de progression et celui des paiements hypothécaires est de 13.3%. Les deux indices accordent une pondération plus grande aux impôts fonciers et aux primes d'assurance (une augmentation de 8.4% en 1988) étant donné qu'ils ne tiennent pas compte de la composante de l'intérêt hypothécaire; les deux affichent des taux d'augmentation supérieurs à 7%.

Tables 4 and 5 of this publication show comparisons between the official CPIs for Canada and the United States. The reader may be interested in reworking the comparisons for the All-items series using the data for the rental equivalence series in Text Table V. Since the U.S. homeownership CPI is based on a rental equivalence concept, the analytical series is more appropriate for U.S.-Canada comparisons. Similarly, the same series is more appropriate to comparisons with the countries in the table that base their owned accommodation series on rents, which include Germany and Japan. The analytical series for the first variant of the money outlays concept is appropriate to comparisons with those countries in Table 6 that use a similar concept, namely Norway and the United Kingdom.

Les tableaux 4 et 5 de la présente publication illustrent des comparaisons entre les IPC officiels pour le Canada et les États-Unis. Il peut être intéressant pour le lecteur de refaire les comparaisons pour la série d'ensemble en utilisant les données de la série de l'équivalence en valeur locative du tableau explicatif V. Étant donné que l'IPC américain du logement en propriété est fondé sur le concept de l'équivalence en valeur locative, la série analytique est plus appropriée pour les comparaisons avec les États-Unis et le Canada. La série convient également mieux aux comparaisons avec les pays du tableau qui fondent leur série du logement en propriété sur les loyers, comme l'Allemagne et le Japon. La série analytique de la première variante du concept des débours convient aux comparaisons avec les pays du tableau 6 qui utilisent un concept similaire, c'est-à-dire la Norvège et le Royaume-Uni.

This article updates the Low-Income Senior-Citizens CPI and the Low-Income CPI which have been published by Statistics Canada for several years. These series are calculated using baskets of goods and services based on the average expenditures of families and unattached individuals in these special groups. March 1982 is the starting point for these series since this was the month when the 1978 expenditure patterns were introduced into the Official CPI and these special indexes have not been calculated for earlier baskets. The 1978 expenditure patterns were used until December 1984 when they were replaced by the 1982 expenditure patterns.

L'objet du présent article est de mettre à jour l'IPC pour les personnes âgées à faible revenu et l'IPC pour les ménages à faible revenu qui sont publiés par Statistique Canada depuis plusieurs années. Ces séries sont calculées en utilisant des paniers de biens et services fondés sur les dépenses moyennes des familles et des personnes seules appartenant à ces groupes particuliers. Le mois de mars 1982 est le point de départ de ces séries puisque c'est là où le régime des dépenses de 1978 a été introduit dans l'IPC officiel et que ces indices particuliers n'ont pas été calculés pour les paniers antérieurs. Le régime des dépenses de 1978 a été utilisé jusqu'en décembre 1984, puis a été remplacé par le régime des dépenses de 1982.

Comparison of the Low-Income Senior-Citizens CPI, Low Income CPI, and the Official CPI, for Canada (March 1982 = 100)

Comparaison de l'IPC, pour les personnes âgées à faible revenu, l'IPC pour les ménages à faible revenu, et l'IPC officiel, pour le Canada (mars 1982 = 100)

Statistics Canada has pointed out on many occasions that sub-group indexes should not be expected to differ, nor do they differ substantially from the All-items index for the Official CPI, although there may be important differences at lower levels of aggregation. As predicted, the 1988 data (contained in Text Table VI) for both the Low-Income Senior-Citizens CPI and the Low-Income CPI showed only minor differences compared to the Official CPI and all exhibited a similar trend. From March 1982 to December 1988, the Official CPI increased by 35.3%, compared to 35.1% for the Low-Income Senior-Citizens CPI, and 36.1% for the Low-Income CPI. Based on movements from annual averages, the Official CPI rose by 4.1%, between 1987 and 1988, while the Low-Income Senior-Citizens CPI and the Low-Income CPI each went up by 3.9%.

Statistique Canada a maintes fois souligné que les indices pour les sous-ensembles ne devraient pas différer et ne diffèrent pas notablement de l'IPC officiel, bien qu'il existe des différences importantes aux niveaux d'agrégation inférieurs. Comme prévu, les données de 1988 (présentées dans le tableau explicatif VI) ne font apparaître que des différences mineures par rapport à l'IPC officiel, qu'il s'agisse de l'IPC pour les personnes âgées à faible revenu ou de l'IPC pour les ménages à faible revenu, et tous ont affiché une tendance semblable. De mars 1982 à décembre 1988, l'IPC officiel a augmenté de 35.3%, alors que l'IPC pour les personnes âgées à faible revenu progressait de 35.1% et l'IPC pour les ménages à faible revenu, de 36.1%. D'après les mouvements fondés sur des moyennes annuelles, l'IPC officiel a augmenté de 4.1% entre 1987 et 1988, alors que l'IPC pour les personnes âgées à faible revenu et l'IPC pour les ménages à faible revenu augmentaient de 3.9%.

In comparing the December 1988 special group indexes to the Official CPI for the seven major components, one of the components, Food, was lower than the Official CPI and five were higher: Housing, Clothing, Transportation, Health and Personal Care, and Tobacco Products and Alcoholic Beverages. For the major component Recreation, Reading and Education the Low-Income Senior-Citizens CPI was lower than the official CPI, but the Low-Income CPI was higher.

Si on compare, pour les sept composantes principales, les indices de décembre 1988 des groupes particuliers à l'IPC officiel, la composante des aliments est inférieure à l'IPC officiel et cinq composantes sont supérieures: habitation, habillement, transports, santé et soins personnels et produits du tabac et boissons alcoolisées. Dans le cas de la composante principale loisirs, lecture et formation, l'IPC pour les personnes âgées à faible revenu était inférieur à l'IPC officiel, tandis que l'IPC pour les ménages à faible revenu était supérieur.

(1) Use of this factor as a multiplier will yield 1981=100 indexes, for those users who require them on this time base.

(1) Les utilisateurs qui ont besoin d'indices sur la base 1981=100 pourront les obtenir en utilisant ce facteur comme multiplicateur.

CPI "REGULATED PRICES"

This article updates indexes and information for the CPI "Regulated" Prices for the year 1988¹. This is the last time this information will be updated.

Commodities whose prices are reviewed by a government agency and commodities that have a portion of their prices set by legislation are considered to be regulated. Using these criteria, the different commodity indexes from the CPI are sorted into a "Regulated" or a "Non-regulated" category. The component "Air Fares" was removed from the calculation of the Regulated indexes, as it was deregulated in the beginning of 1988. Text table VII of this article contains the resulting indexes for "Regulated" and "Non-Regulated" groupings, as well as for several special aggregates.

All-Items²
Regulated
Non-regulated
Regulated energy
Regulated ex. Regulated Energy

For 1988, the year-to-year movement for the "Regulated" index was greater than the year-to-year movement for the All-items index. The year-to-year movement for the Regulated index in 1987 was slightly lower than the All-items movement. This acceleration of the movement of the "Regulated" grouping was caused mainly by an increase of the Tobacco Products and Alcoholic Beverages index which represents 23.5% of the regulated weights. Other items that contributed to the acceleration of the movement were Rental of Cablevision, Chicken and Local and Commuter Transportation. On the other hand, the year-to-year movement for the "Non-regulated" index was slightly below the All-items index in 1988. "Regulated Energy" year-to-year movement was lower than the All-items year-to-year movement. As a result, the "Regulated Excluding Regulated Energy" was higher than the movement for the "Regulated" series as a whole.

¹ Indexes and information on CPI "Regulated" Prices were first issued in a study released as a supplement to the July to September 1986 issue of Consumer Prices and Price Indexes. The original study contained indexes and information relating to CPI "Regulated" prices for the period April 1973 to June 1986. Further information concerning methodology, etc. may be obtained by contacting the Development and Analysis Unit of Prices Division at (613)-951-4777.

² The All-Items movements slightly differ from the official movement due to rebasing and rounding procedures.

"PRIX RÉGLEMENTÉS" DE L'IPC

L'objet du présent article est de mettre à jour les indices et les renseignements concernant les prix "réglementés" de l'IPC, pour l'année 1988¹. Ces renseignements sont mis à jour pour la dernière fois.

Les produits dont les prix sont révisés par un organisme gouvernemental et les produits dont les prix sont fixés en partie par des textes législatifs sont considérés comme étant réglementés. A partir de ces critères, les différents indices des produits de l'IPC sont classés en une catégorie "réglementée" ou une catégorie "non réglementée". La composante "transport aérien" a été soustraite du calcul des indices réglementés car ce secteur a été déréglementé au début de 1988. Les indices obtenus pour les produits "réglementés" et "non réglementés", de même que plusieurs agrégats spéciaux figurent au tableau explicatif VII.

Year-to-year change
Variation d'une année à l'autre

| 88/87 | 87/86 | |
|-------|-------|---|
| 4.0% | 4.4% | Ensemble ² |
| 5.0% | 4.3% | Prix "Réglementés" |
| 3.7% | 4.4% | Prix "non réglementés" |
| 1.9% | 2.8% | Prix "réglementés" de l'énergie |
| 5.5% | 4.6% | Prix "réglementés" sans les prix prix "réglementés" de l'énergie |

En 1988, le mouvement d'une année à l'autre des indices réglementés était supérieur à celui de l'indice d'ensemble. En 1987, le mouvement d'une année à l'autre des indices réglementés était légèrement inférieur à celui de l'ensemble. Cette accélération du mouvement des produits "réglementés" est attribuable surtout à une augmentation de l'indice des produits du tabac et des boissons alcooliques, lequel représente 23.5% de la pondération des produits réglementés. Les autres articles qui ont contribué à l'accélération du mouvement sont la télédistribution par câble, le poulet et le transport local et de banlieue. En ce qui concerne l'indice "non réglementé", le mouvement d'une année à l'autre pour 1988 est légèrement inférieur à celui de l'indice d'ensemble. Le mouvement d'une année à l'autre des prix "réglementés" de l'énergie était inférieur à celui de l'indice d'ensemble. Par conséquent, le mouvement des prix réglementés sans les prix réglementés de l'énergie était supérieur à celui de l'indice "réglementé" total.

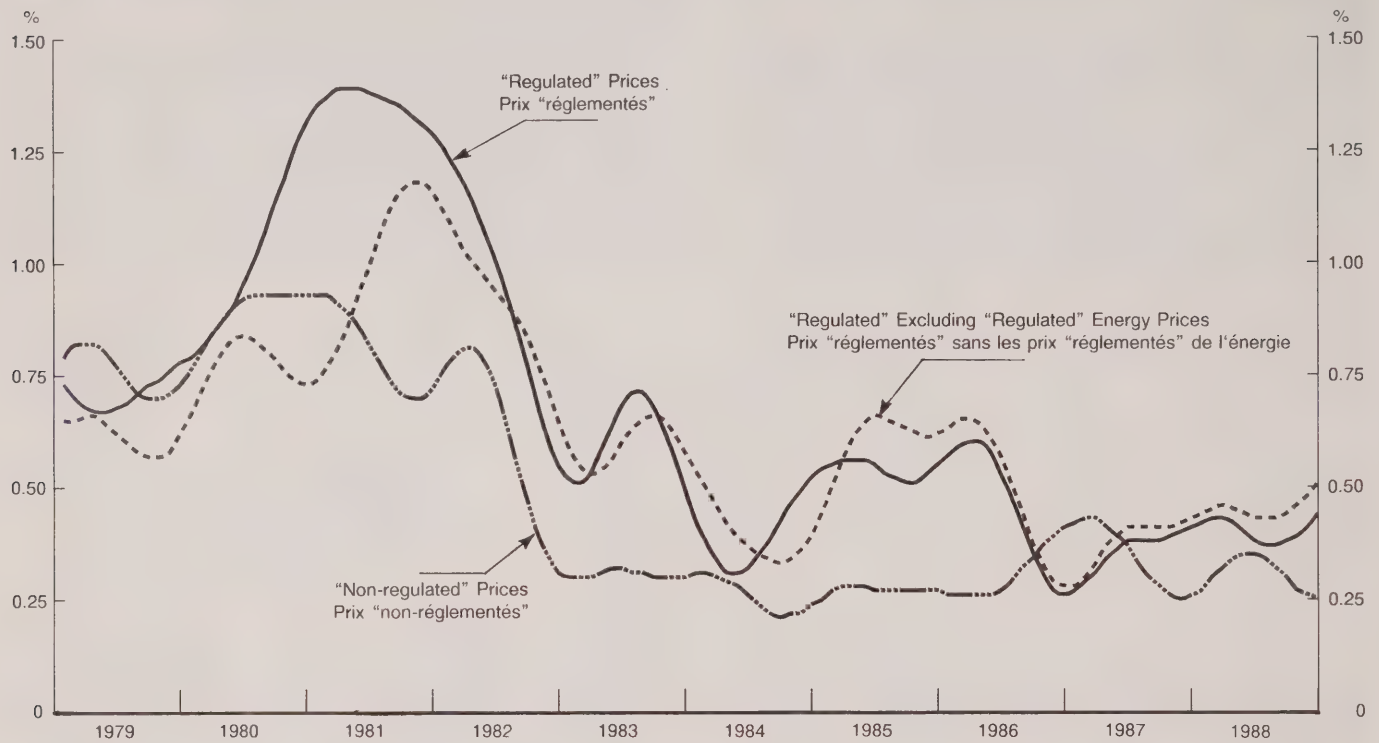

¹ Des indices et des renseignements sur les prix "réglementés" de l'IPC ont été publiés pour la première fois dans une étude qui complétait le numéro de juillet-septembre 1986 de Prix à la consommation et indices de prix. L'étude en question renfermait des indices et des renseignements ayant trait aux prix "réglementés" de l'IPC pour la période allant d'avril 1973 à juin 1986. Pour obtenir plus de renseignements au sujet de la méthodologie, etc., veuillez communiquer avec la Sous-section du développement et de l'analyse de la Division des prix, au (613)-951-4777.

² Le mouvement de l'ensemble est légèrement différent du mouvement officiel à cause des changements de base et des procédures d'arrondissement.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE VIII. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF VIII. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

| Major components | Weights 1982 | Weights 1986 |
|--|----------------------|----------------------|
| Composantes principales | Pondérations 1982 | Pondérations 1982 |
| All-items - Ensemble | 100.00(1) | 100.00(1) |
| Food - Aliments | 20.02 | 18.05 |
| Housing - Habitation | 38.14 | 36.32 |
| Clothing - Habillement | 8.37 | 8.69 |
| Transportation - Transports | 15.75 | 18.29 |
| Health and personal care - Santé et soins personnels | 4.02 | 4.20 |
| Recreation, reading and education - Loisirs, lecture et formation | 8.25 | 8.84 |
| Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées | 5.45 | 5.60 |

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table VIII represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

Les pondérations du tableau explicatif VIII représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves com-

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuable à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux

pounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be

de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n^o 62-005 au catalogue), vol. 4, n^o 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en

used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSÉASONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

| Principal commodity group | Number of items priced (if available) |
|---------------------------------------|---------------------------------------|
| Food at home | 104 |
| Meals away from home | 9 |
| Household maintenance and services | 11 |
| Household supplies | 8 |
| Communications | 3 |
| Domestic help (depending on location) | 2-8 |

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

| Groupe principal de produits | Nombre d'articles dont le prix est relevé (lorsque disponibles) |

ROCK SOLID INFORMATION

DE L'INFORMATION SOLIDE COMME LE ROC

Get a focus on Canada's markets and business opportunities with **the** source of reliable information... Statistics Canada and its unequaled family of outstanding publications and services.

Relying on Statistics Canada means you're building your decisions on hard facts assembled by a professional organization with a world-wide reputation for scrupulous accuracy and complete reliability.

Join the thousands of corporations and individuals who base their Canadian business decisions on Statistics Canada publications. Year after year.

For more information on Statistics Canada's extensive range of publications and information services, please call toll-free 1-800-267-6677.

At Statistics Canada, we provide information you can build on.

Statistique Canada vous offre des produits et services de qualité qui vous donnent une image claire du secteur canadien des affaires.

Joignez-vous aux milliers de personnes et d'entreprises qui, année après année, fondent leurs décisions sur les publications de Statistique Canada.

Vous fier à Statistique Canada, c'est fonder vos décisions sur des renseignements solides, recueillis par un organisme dont la réputation internationale en est une d'exactitude et de fiabilité.

Pour obtenir plus de renseignements sur toute la gamme de publications et de services qu'offre Statistique Canada, veuillez composer le numéro sans frais 1-800-267-6677.

Statistique Canada fournit l'information à la base des grandes réalisations.

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

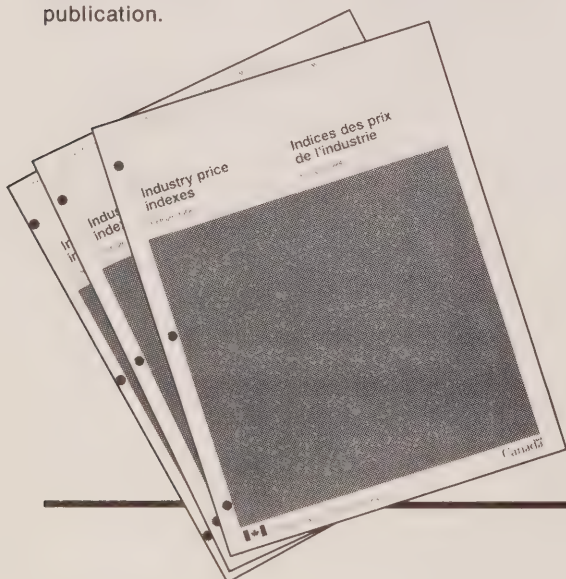

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail, **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$173 in Canada, and \$208 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 173 \$ au Canada et 208 \$ à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

| | | | |

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolinguée et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . Barbara J. Slater, Director,
Prices Division
- . J. Arthur Ridgeway, Chief,
Consumer Prices Section
- . Harold Harnarine, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

- . Barbara J. Slater, directeur,
Division des prix
- . J. Arthur Ridgeway, chef
Section des prix à la consommation

HIGHLIGHTS

Consumer Price Behaviour

Second Quarter, 1989

Trends in the All-items Index

Between March and June 1989 (second quarter) the All-items Consumer Price Index (CPI) increased by 1.7% in seasonally-adjusted terms. This continued the rise in this measure of inflation which rose from 1.0% to 1.4% between the fourth quarter of 1988 and the first quarter of 1989. Within the latest quarter, the seasonally-adjusted monthly rate varied from 0.3% in April to 0.7% in May.

In unadjusted terms, the All-items index also advanced at an accelerated 1.9% in the latest quarter, compared to a rise of 1.6% registered in the previous period. The annual rate of increase, as measured by the average of 12-month changes for the three-months of the second quarter, was 5.0%, also up noticeably from the 4.5% increase reported in the first quarter.

Major Contributors to the Second Quarter Change

The All-items index advanced by 1.9% in unadjusted terms between March and June 1989 (second quarter). The change comprised increases of 1.7% in the Food index and 1.9% in the index for All-items excluding Food.

In addition to the rise in the Food index, five of the other major component indexes also posted advances ranging from 0.9% in the Health and Personal Care index to 7.6% in the Tobacco Products and Alcoholic Beverages index. At the same time, the Clothing index fell by a slight 0.2%.

The largest proportion of the 1.9% increase in the CPI in the latest quarter resulted from a 3.0% rise in the Transportation index. This impact was followed in rank order by increases in Housing (1.3%), Tobacco Products and Alcoholic Beverages (7.6%) and Food (1.7%). Movements in the remaining three other major component indexes contributed marginally to the latest advance in the CPI.

A large part of the 3.9% increase in the Transportation index resulted from a rise of 10.6% in gasoline prices, attributable largely to a higher Federal Excise tax, a rise in crude oil prices and a lower incidence of "price-war" activities. Prices of new automobiles rose by 1.1%, largely due also to a rise in the Federal Manufacturer's tax (from 12.0% to 13.5%). A 3.1% increase in automobile insurance premiums and increases for automobile maintenance and repair charges and parking rates were also noted. Some moderating effects on the latest increase resulted from a 4.8% decline in air-fares, some of which was of a seasonal nature.

The Housing index climbed by 1.2% with over one half of the increase due to a 2.0% rise in the owned Accommodation index. The latter was heavily influenced by increases in mortgage interest costs and in the prices of new houses. The Rent index was up 1.2% in the quarter and also contributed. Higher charges for electricity, traveller accommodation and telephone services accompanied by price increases for furniture were also registered. At the same time, a modest dampening effect resulted from lower prices for piped gas and household textiles.

FAITS SAILLANTS

Comportement des prix à la consommation

Deuxième trimestre, 1989

Tendances de l'indice d'ensemble

Entre mars et juin 1989 (deuxième trimestre), l'indice désaisonnalisé des prix à la consommation a augmenté de 1.7%. Cela signifie que la tendance à la hausse de cette mesure de l'inflation, qui est passée de 1.0% à 1.4% entre le quatrième trimestre de 1988 et le premier trimestre de 1989, se poursuit. Au cours du dernier trimestre, le taux mensuel désaisonnalisé a varié de 0.3% en avril à 0.7% en mai.

L'indice d'ensemble non désaisonnalisé a également progressé au cours du dernier trimestre, au rythme accéléré de 1.9%, comparativement à la hausse de 1.6% enregistrée au cours de la période précédente. Le taux d'augmentation annuel, établi à partir de la moyenne des variations sur 12 mois pour les trois mois du deuxième trimestre, a été de 5.0%, soit un taux sensiblement plus élevé que celui de 4.5% observé au premier trimestre.

Principaux facteurs de la variation au deuxième trimestre

L'indice d'ensemble non désaisonnalisé a progressé de 1.9% entre mars et juin 1989 (deuxième trimestre). La variation comprend les augmentations de 1.7% de l'indice des aliments et de 1.9% de l'indice d'ensemble sans les aliments.

En plus de l'indice des aliments, cinq autres composantes principales ont enregistré des augmentations comprises entre 0.9% pour l'indice de la santé et des soins personnels et 7.6% pour l'indice des produits du tabac et des boissons alcoolisées. Parallèlement, l'indice de l'habillement a subi une baisse légère de 0.2%.

La majeure partie de l'augmentation de 1.9% de l'IPC au cours du dernier trimestre est attribuable à la hausse de 3.0% de l'indice des transports. Celle-ci est suivie, par ordre d'importance, des majorations de l'indice de l'habitation (1.3%), des produits du tabac et des boissons alcoolisées (7.6%) et des aliments (1.7%). Les mouvements des trois autres composantes principales des indices ont à peine contribué à la dernière hausse de l'IPC.

La hausse de 3.9% de l'indice des transports est attribuable en majeure partie à un accroissement de 10.6% du prix de l'essence, qui s'explique surtout par la majoration de la taxe d'accise fédérale et du prix du pétrole brut et par une réduction des "guerres des prix". Le prix des automobiles neuves a progressé de 1.1% en raison principalement de la majoration de la taxe sur les ventes des fabricants (qui est passé de 12.0% à 13.5%). On observe également une progression de 3.1% des primes d'assurance-automobile et des augmentations des frais d'entretien et de réparation des automobiles et des tarifs de stationnement. Cette dernière hausse a été quelque peu contrebalancée par une baisse de 4.8% des tarifs aériens, attribuable en partie à des facteurs saisonniers.

L'indice de l'habitation a progressé de 1.2% et plus de la moitié de cette hausse est attribuable à la majoration de 2.0% de l'indice du logement en propriété. Ce dernier a été fortement influencé par la hausse du coût des intérêts hypothécaires et du prix des maisons neuves. L'indice du loyer, en hausse de 1.2% au cours du trimestre, a également contribué à cette augmentation. En outre on enregistré des progressions des tarifs d'électricité, de l'hébergement des voyageurs et des services téléphoniques de même qu'une majoration du prix des meubles. Parallèlement la diminution des prix du gaz naturel et des articles ménagers en matière textile a exercé un léger effet modérateur.

Much of the 7.6% rise in the Tobacco Products and Alcoholic Beverages index was due to an advance of 18.7% in the Tobacco Products sub-component index. The sharp climb in the latter index was assignable to a significant hike in the Federal Excise tax at the end of April, complemented by tax increases initiated by several provinces during the second quarter. Increases in Federal Sales taxes partly accounted for a 1.7% increase in the Alcoholic Beverages sub-component index.

The Food index climbed by 1.7%, as increases of 2.1% were registered by the index for Food Purchased from Stores and 0.9% for the Food Purchased from Restaurants index. Much of the rise in the prices of food bought from grocery stores was concentrated in the Fresh Vegetables index where prices of storable vegetables (potatoes, carrots, cabbage and celery) posted some sharp, mostly seasonal increases. The Fresh Fruit index also rose by 8.3%, driven largely by higher prices for citrus fruits. Moderate price increases were also observed for pork, chicken, beef and selected dairy products. Some moderation resulted from lower prices for cured-meat and soft drinks.

Changes in the Recreation, Reading and Education index (1.1%), in the Health and Personal Care index (0.9%) and in the Clothing index (down 0.2%) made separate marginal contributions to the latest quarterly change in the CPI. The first index reflected mainly higher prices for photographic goods, summer recreational vehicles and movie tickets, along with increased fees and dues associated with summer recreational activities. The second index was responding to higher charges for dental care and hair cutting and grooming services. The Clothing index declined mainly because of sales and promotional activities, particularly in April and June.

La majeure partie de l'accroissement de 7.6% de l'indice des produits du tabac et des boissons alcoolisées est attribuable à la hausse de 18.7% de la sous-composante de l'indice des produits du tabac. La forte augmentation de ce dernier s'explique par la majoration considérable de la taxe d'accise fédérale à la fin du mois d'avril, et par les augmentations d'impôt décrétées par plusieurs provinces au deuxième trimestre. La hausse de 1.7% de la sous-composante de l'indice des boissons alcoolisées est attribuable en partie au relèvement de la taxe de vente fédérale.

L'indice des aliments a grimpé de 1.7%, en raison des hausses de 2.1% de l'indice des aliments achetés au magasin et de 0.9% de l'indice des aliments achetés au restaurant. La majeure partie de l'augmentation du prix des aliments achetés à l'épicerie s'est faite sentir surtout au niveau de l'indice des légumes, pour lequel on a enregistré un accroissement du prix des légumes entreposables (pommes de terre, carottes, choux et céleri) assez rapide dans certains cas, le plus souvent de nature saisonnière. L'indice des fruits frais a également progressé de 8.3% en raison surtout de la hausse du prix des agrumes. On a également observé une augmentation modérée du prix du porc, du poulet, du boeuf et de certains produits laitiers. La baisse du prix de la viande de salaison et des boissons gazeuses a exercé un certain effet modérateur.

Les variations de l'indice des loisirs, de la lecture et de la formation (1.1%), de l'indice de la santé et des soins personnels (0.9%) et de l'indice de l'habillement (0.2%) ont chacune joué un rôle peu important au regard de la dernière variation trimestrielle de l'IPC. Dans le cas du premier indice, la hausse s'explique par la majoration du prix du matériel photographique, des véhicules de loisirs d'été, des billets de cinéma, et des frais et cotisations pour les activités de loisirs d'été. Dans le cas du deuxième indice, on a enregistré une augmentation des frais liés aux soins dentaires et à la coupe et à la mise en plis de cheveux. Les ventes et les activités promotionnelles, surtout en avril et en juin, ont été les causes principales de la diminution de l'indice de l'habillement.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n^o 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagréé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

| Major components | Weights 1982 | Weights 1986 |
|--|----------------------|----------------------|
| Composantes principales | Pondérations 1982 | Pondérations 1982 |
| All-items - Ensemble | 100.00(1) | 100.00(1) |
| Food - Aliments | 20.02 | 18.05 |
| Housing - Habitation | 38.14 | 36.32 |
| Clothing - Habillement | 8.37 | 8.69 |
| Transportation - Transports | 15.75 | 18.29 |
| Health and personal care - Santé et soins personnels | 4.02 | 4.20 |
| Recreation, reading and education - Loisirs, lecture et formation | 8.25 | 8.84 |
| Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées | 5.45 | 5.60 |

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves com-

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux

pounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be

de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en

used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n^o 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n^o 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n^o 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut; ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

| Principal commodity group | Number of items priced (if available) |
|---------------------------------------|---------------------------------------|
| Food at home | 104 |
| Meals away from home | 9 |
| Household maintenance and services | 11 |
| Household supplies | 8 |
| Communications | 3 |
| Domestic help (depending on location) | 2-8 |

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from

fish fillets to industrial

furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail, monthly **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

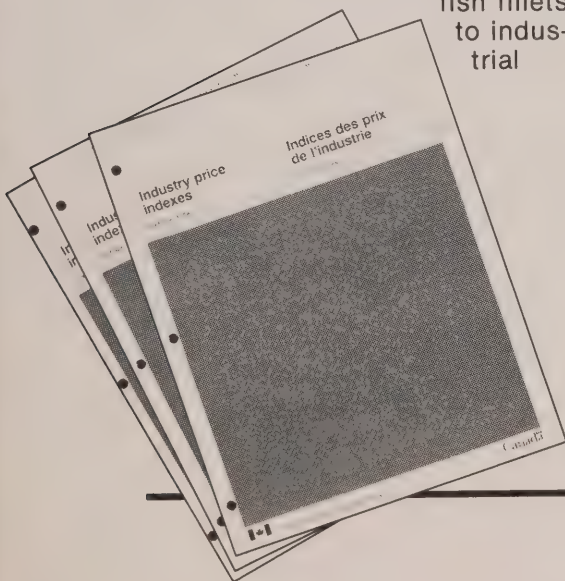

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$173 in Canada, and \$208 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), the **Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- food
- clothing
- housing
- health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of changes.

Get the facts.

Subscribe to the **Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$89 in Canada, and \$107 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur :

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changements.

Abonnez-vous !

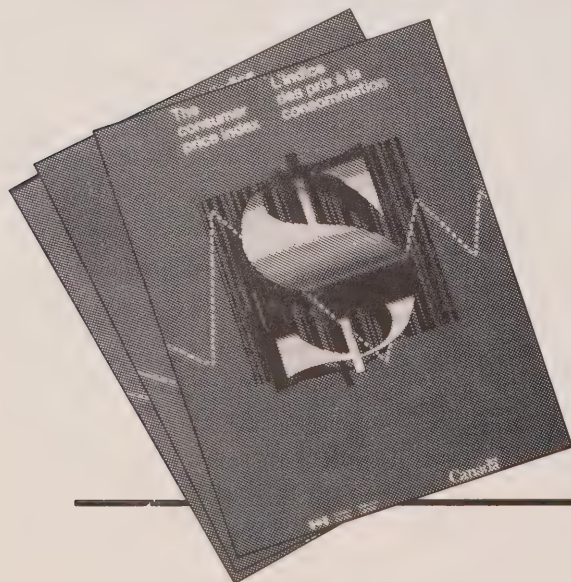

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 89 \$ au Canada et 107 \$ à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Harold Harnarine**, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

HIGHLIGHTS

Consumer Price Behaviour

Third Quarter, 1989

Trends in the All-items Index

Between June and September 1989 (third quarter), the All-items Consumer Price Index (CPI) for Canada advanced by 1.0% in seasonally-adjusted terms. The latest performance was noticeably slower than the increases of 1.4% and 1.7% recorded for the first and second quarter respectively. Within the third quarter, most of the seasonally-adjusted monthly increase was concentrated in July (0.7%).

In unadjusted terms, the All-items index also advanced at a decelerated 0.9% in the third quarter, compared to increases of 1.6% and 1.9% respectively in the first and second quarter of this year. This measure, however, conflicted with the average of 12-month changes for the three months of the third quarter, which rose 5.3%, compared to corresponding increases of 4.5% and 5.0% noted for the first and second quarter respectively.

Major Contributors to the Third Quarter Change

As noted above, the All-items index advanced 0.9% in unadjusted terms between June and September 1989. The change comprised an increase of 1.0% in the All-items excluding Food index, offset, to a small extent, by a fall of 0.1% in the Food index.

The six major non-food components of the CPI registered increases ranging from 0.8% (Transportation) to 1.6% (Clothing). However, the largest impact on the latest change in the All-items index resulted from a rise of 0.9% in the Housing index. This was followed in diminishing order by increases in Transportation (0.8%), Clothing (1.6%) and Recreation, Reading and Education (1.3%). Increases in the Tobacco Products and Alcoholic Beverages index (1.0%) and the Health and Personal Care index (1.2%) were considerably less influential in accounting for the change in the All-items index.

By far, the largest impact on the 0.9% rise in the Housing index was attributable to increases of 1.6% and 1.1% respectively in the Rented Accommodation and Owned Accommodation indexes. The latter was dominated by increases in mortgage interest cost and, to a lesser extent, by higher prices for new homes. Other important advances were associated with Traveller Accommodation (5.3%) and selected components of Household Operation (0.9%) including increased charges for child care services, pet food and paper products. Water rates also advanced, as did prices for household textiles. A small part of this upward pressure was dampened by a fall in piped gas rates and furniture prices.

The 0.8% advance in the Transportation index was comprised of increases of 0.7% in the Private Transportation and 1.3% in the Public Transportation sub-components. In the former, increases were registered for gasoline prices (partly due to tax increases in several provinces) and for other expenditure categories relating to the operation of the private automobile, notably, maintenance and repairs, insurance coverage and registration fees (mainly in Ontario). Automobile rental and leasing charges also rose noticeably. A small proportion of this overall upward effect was offset by a fall in automobile prices, largely due to dealer discounts aimed at reducing inventories of 1989 model cars.

FAITS SAILLANTS

Comportement des prix à la consommation

Troisième trimestre, 1989

Tendances de l'indice d'ensemble

Entre juin et septembre 1989 (troisième trimestre), l'indice désaisonnalisé des prix à la consommation pour le Canada a augmenté de 1.0%. Ce rythme d'augmentation était sensiblement moins marqué que durant les premier et deuxième trimestres, où l'on enregistré des augmentations de 1.4% et de 1.7% respectivement. Durant le troisième trimestre, la plus grande partie de l'augmentation mensuelle désaisonnalisée s'est produite en juillet (0.7%).

L'indice d'ensemble non désaisonnalisé a également progressé au cours du troisième trimestre à un rythme ralenti de 0.9%, en comparaison des augmentations de 1.6% et de 1.9% enregistrées respectivement au cours des premier et deuxième trimestres de cette année. Ce taux, toutefois, s'opposait à la moyenne des variations sur 12 mois pour les trois mois du troisième trimestre, qui a augmenté de 5.3% en comparaison des augmentations correspondantes de 4.5% et de 5.0% enregistrées respectivement pour les premier et deuxième trimestres.

Principaux facteurs de la variation au troisième trimestre

Comme il a été noté ci-dessus, l'indice d'ensemble non désaisonnalisé a progressé de 0.9% entre juin et septembre 1989. Cette variation comprenait une augmentation de 1.0% de l'indice d'ensemble sans les aliments, compensée dans une faible mesure par une diminution de 0.1% enregistrée dans l'indice des aliments.

Les six principales composantes non-alimentaires de l'IPC ont enregistré des augmentations allant de 0.8% (transports) à 1.6% (habillement). Cependant, l'indice d'ensemble a été touché principalement par une augmentation de 0.9% enregistrée dans l'indice de l'habitation. Cette hausse était suivie en ordre décroissant par des augmentations dans les transports (0.8%), l'habillement (1.6%) et les loisirs, la lecture et la formation (1.3%). Les augmentations dans l'indice des produits du tabac et des boissons alcoolisées (1.0%) et dans l'indice de la santé et des soins personnels (1.2%) ont joué un rôle beaucoup moins important en ce qui touche les variations de l'indice d'ensemble.

La cause de loin la plus importante de l'augmentation de 0.9% enregistrée dans l'indice de l'habitation réside dans les augmentations de 1.6% et de 1.1% enregistrées respectivement dans l'indice des logements loués et dans celui des logements possédés. Ce dernier indice a été touché principalement par les hausses du coût des intérêts hypothécaires et, dans une moindre mesure, par les prix plus élevés exigés pour les nouvelles maisons. D'autres hausses importantes avaient trait à l'hébergement des voyageurs (5.3%) et à des composantes choisies des dépenses de ménage (0.9%), notamment les frais accrus des services de soins d'enfants, de la nourriture pour animaux et des produits du papier. La taxe d'eau a également augmenté, ainsi que les prix des articles ménagers en matière textile. Ce mouvement à la hausse a été affaibli légèrement par la baisse enregistrée dans les taux du gaz naturel et dans les prix des meubles.

La hausse de 0.8% enregistrée dans l'indice des transports consistait en des augmentations de 0.7% de la sous-composante des transports privés et de 1.3% de la sous-composante des transports publics. Dans la première sous-composante, des augmentations ont été enregistrées dans les prix de l'essence (en partie à cause des augmentations de taxes dans plusieurs provinces) et dans d'autres catégories de dépenses ayant trait au fonctionnement de l'automobile, notamment l'entretien et la réparation, les primes d'assurance-automobile et les frais d'immatriculation (principalement en Ontario). Les frais de location d'automobiles ont également augmenté de manière sensible. Une faible proportion de ce mouvement à la hausse a été compensée par une diminution des prix des automobiles, due largement aux rabais des concessionnaires visant à la réduction des stocks d'automobiles de modèle 1989.

The Clothing index advanced by 1.6% in the third quarter, following a fall of 0.2% reported in the second quarter. The rise in the most recent period was associated with the new Fall Clothing lines. A large part of the increase resulted from a 2.3% rise in the Women's Wear index, followed by a 1.1% climb in the Men's Wear Index. In women's clothing, noticeable price increases were observed for suits, dresses, sportswear and foundation garments. In the men's wear category, higher prices for suits were a major factor. Some moderating influence resulted from declines in women's fur coats and men's pants.

The Recreation, Reading and Education index rose by 1.3%, as the Education component advanced by 4.9%, reflecting an annual advance of 5.6% in university tuition fees, reported in the CPI in September. The Recreation index was up by 0.5%, as prices of sporting and athletic equipment, photographic goods and cable-vision services rose. The Reading Material component of this index also advanced by 1.9%.

Increases of 1.0% in the Tobacco Products and Alcoholic Beverages index and 1.2% in the Health and Personal Care index contributed marginally to the third quarter advance in the CPI. The former rose in response to higher cigarette prices caused, in part, by the lagged effect of increases in the Federal Sales tax and by higher taxes initiated by Manitoba and British Columbia. Price increases of a lesser order, for alcoholic beverages were also registered. The Health and Personal Care index rose, as higher charges were reported for dental care, eye care, prescribed medicines, selected personal care supplies and hair-grooming services.

The 0.1% decline in the Food index resulted from a sharp 0.9% fall in the Food Purchased from Stores index offset, to a large extent, by a rise of 1.6% in the index for Food Purchased from Restaurants. The bulk of the decline in the Food Purchased from Stores index was associated with a sharp 30.3% drop in the index for Fresh Vegetables. Favourable domestic supplies from the 1989 crop have lowered the prices of nearly all types of fresh vegetables. Some part of the overall downward pressure was offset by higher prices for meat products, notably for chicken, cured meat, prepared and ready-cooked meat. Other price increases were observed for selected dairy products, eggs, bakery products, breakfast cereal, sugar, margarine and soft drinks.

L'indice de l'habillement a progressé de 1.6% au cours du troisième trimestre, suite à la baisse de 0.2% enregistrée pour le deuxième trimestre. L'augmentation ayant marqué la période la plus récente est reliée à la sortie des vêtements d'automne. Une grande partie de l'augmentation a résulté de la hausse de 2.3% enregistrée dans l'indice des vêtements pour femmes, suivie par une hausse de 1.1% dans l'indice des vêtements pour hommes. En ce qui touche les vêtements pour femmes, on a observé des augmentations significatives pour les tailleurs, les robes, les vêtements de sport et les vêtements de base. Dans la catégorie des vêtements pour hommes, la hausse des prix des complets a constitué un facteur prédominant. Les baisses enregistrées dans les manteaux de fourrure pour femmes et dans les pantalons pour hommes ont joué un certain rôle modérateur.

L'indice des loisirs, de la lecture et de la formation a augmenté de 1.3%, la composante de la formation ayant progressé de 4.9% eu égard à la hausse annuelle de 5.6% des frais de scolarité universitaires enregistrée dans l'IPC de septembre. L'indice des loisirs a augmenté de 0.5% à cause des hausses enregistrées dans les prix des articles de sport et d'athlétisme, du matériel photographique et des services de télédiffusion. La composante de la lecture a également progressé de 1.9%.

L'augmentation de 1.0% enregistrée dans l'indice des produits du tabac et des boissons alcoolisées, et celle de 1.2% enregistrée dans l'indice de la santé et des soins personnels, ont joué un rôle peu important dans la hausse de l'IPC au cours du troisième trimestre. Le premier indice a augmenté suite à la hausse des prix des cigarettes, elle-même faisant suite, avec un certain retard, aux augmentations de la taxe fédérale de vente et aux taxes plus élevées instaurées par le Manitoba et la Colombie-Britannique. On a également enregistré des augmentations de prix, moins significatives toutefois, en ce qui touche les boissons alcoolisées. L'indice de la santé et des soins personnels a augmenté, car des frais plus élevés ont été signalés pour les soins dentaires, les soins oculaires, les médicaments prescrits, des produits choisis pour soins personnels, et les services de mise en plis de cheveux.

La diminution de 0.1% enregistrée dans l'indice des aliments a résulté d'une baisse abrupte de 0.9% dans l'indice des aliments achetés au magasin, elle-même annulée dans une grande mesure par l'augmentation de 1.6% enregistrée dans l'indice des aliments achetés au restaurant. La plus grande partie de la baisse de l'indice des aliments achetés au magasin était associée à la baisse abrupte de 30.3% enregistrée dans l'indice des légumes frais. Les conditions favorables de l'approvisionnement intérieur résultant de la récolte de 1989 ont entraîné des diminutions de prix pour presque toutes les sortes de légumes. Une certaine partie de ce mouvement d'ensemble à la baisse a été compensée par les prix plus élevés demandés pour les viandes, notamment le poulet, la viande de salaison, ainsi que la viande préparée et les viandes cuites. D'autres augmentations de prix ont été observées pour certains produits laitiers, les oeufs, les produits de boulangerie, les céréales de table, le sucre, la margarine et les boissons gazeuses.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

TABLE 2. Purchasing Power of the Consumer Dollar(1) Expressed in Cents, Compared to 1981, 1980-1989

PRICE MEASUREMENT OF NON-MORTGAGE CREDIT IN THE CPI: AN OVERVIEW OF CONCEPTUAL ISSUES

INTRODUCTION

In this note, funds borrowed to purchase dwellings are referred to as mortgage credit while funds borrowed to purchase other items, such as motor vehicles, furniture, and appliances, are referred to as non-mortgage credit. Mortgage credit is included in the Canadian CPI while non-mortgage credit is not.

There have long been calls for the introduction of non-mortgage credit into the CPI. Advocates believe it is inconsistent to exclude non-mortgage credit while including mortgage credit. They also draw attention to the significance of non-mortgage credit: the 1986 Family Expenditure Survey category, 'Interest on Personal Loans', accounted for 1.2% of household consumption expenditures.

However, internal discussion within Prices Division - see Foster (1972) and Gagnéux (1980) - has found it difficult to arrive at a consensus on treatment. This consensus has not emerged in the past largely because the introduction of non-mortgage credit into the CPI would raise a host of conceptual difficulties. The purpose of this note is to provide an overview of these conceptual difficulties, focusing on research conducted in Canada and four other countries: U.S., U.K., Australia, and New Zealand. In brief, there are four problems: whether to treat credit as a separate commodity, whether to use acquired or outstanding debt in the reference period, what components of interest payments fit into the CPI, and whether real interest rates should be used. Each problem is discussed in a separate section below.

Choice Between Cost of Good and Cost of Credit Approaches

According to the cost of good approach, expenditures on credit are treated as part of the cost of buying specific goods. Consequently, credit indexes are calculated for the various commodities sold on credit and included as sub-indexes of the respective commodity price indexes. For example, a measure of the price-attributed changes in the cost of using a fixed stock of a durable good - the case in the owned accommodation component of the Canadian CPI - would include a sub-index for the associated credit expenditures because these credit expenditures are judged to be part of the costs of usage. Alternatively, a measure of the price-attributed changes in money outlays on a good would include a sub-index for credit expenditures because these credit expenditures are judged to be an outlay associated with the good.

According to the cost of credit approach, credit is treated as a commodity in its own right. Consequently, it is given a separate category in the CPI and an index is calculated for the whole of the credit aggregate. Credit could be viewed as a distinct commodity because it provides a utility distinct from the utility provided by the associated good, i.e. the utility of immediate consumption. Credit costs would then represent the costs of advancing consumption into the current period. Relatedly, it could be argued that credit involves the purchase of an entity different from the associated goods, what Woodhouse and Hansen (1987) label, 'immediately available disposable income'. Lending further support is the fact that the price of credit is often determined in a market different from the market in which the associated commodity is purchased.

LA MESURE DU PRIX DU CRÉDIT NON HYPOTHÉCAIRE DANS L'IPC: UN APERÇU DES QUESTIONS CONCEPTUELLES

INTRODUCTION

Dans le présent document, les emprunts en vue d'acquies un logement relèvent du crédit hypothécaire tandis que ceux qui servent à acheter d'autres articles, notamment des véhicules, moteurs, des meubles et des appareils, font partie de la catégorie du crédit non hypothécaire. Dans l'IPC canadien, on tient compte du crédit hypothécaire mais non du crédit non hypothécaire.

On réclame depuis longtemps l'introduction du crédit non hypothécaire dans l'IPC. Les personnes qui préconisent cette mesure estiment que l'exclusion du crédit non hypothécaire est incompatible avec l'inclusion du crédit hypothécaire. Elles soulignent également l'importance du crédit non hypothécaire: la catégorie de "l'intérêt sur les prêts personnels" de l'enquête sur les dépenses des familles de 1986 représentait 1.2% des dépenses de consommation des ménages.

Toutefois, les discussions internes au niveau de la Division des prix - voir Foster (1972) et Gagnéux (1980) - n'ont pas permis d'en arriver à un consensus quant au traitement. Cela a été impossible en grande partie parce que l'introduction du crédit non hypothécaire dans l'IPC entraînerait une foule de difficultés conceptuelles. Le présent document vise à donner un aperçu de celles-ci, en se concentrant sur les recherches menées au Canada et dans quatre autres pays: les États-Unis, le Royaume-Uni, l'Australie et la Nouvelle-Zélande. En résumé, il y a quatre problèmes: à savoir s'il faut considérer le crédit comme un produit distinct, s'il faut se servir de la dette nouvellement acquise ou en cours, déterminer les éléments des paiements d'intérêt qui concordent avec l'IPC et s'il faut se servir des taux d'intérêt réels. Chacun de ces problèmes est étudié dans une section distincte ci-dessous.

Le choix entre l'approche fondée sur le coût du bien et celle fondée sur le coût du crédit

Selon l'approche fondée sur le coût du bien, les dépenses liées au crédit sont considérées comme étant rattachées au coût d'acquisition de biens spécifiques. Par conséquent, on calcule des indices du crédit pour les différents produits vendus à crédit, lesquels sont intégrés, en qualité de sous-indices, aux indices des prix des produits correspondants. Par exemple, pour mesurer les changements attribuables au prix en ce qui a trait au coût d'utilisation d'un stock fixe de biens durables, on tient compte, comme c'est le cas pour la composante du logement en propriété de l'IPC canadien, d'un sous-indice des dépenses associées au crédit parce qu'on considère que celles-ci font partie des coûts d'utilisation. De la même façon, pour mesurer les variations attribuables au prix dans les débours relatifs à un bien, il faut tenir compte d'un sous-indice des dépenses de crédit, car ces dépenses de crédit sont considérées comme un débours associé au bien.

Dans le contexte de l'approche fondée sur le coût du crédit, le crédit est considéré comme un produit en soi. Par conséquent, on lui donne une catégorie distincte dans l'IPC et l'on calcule un indice pour l'ensemble de l'agrégat du crédit. Le crédit peut être envisagé comme un produit distinct car il fournit une utilité qui diffère de celle fournie par le bien auquel il est associé, c'est-à-dire l'utilité de la consommation immédiate. Les coûts de crédit représentent alors les coûts de la consommation anticipée durant la période en cours. À cet égard, on pourrait soutenir que le crédit implique l'acquisition d'une entité qui diffère des biens auxquels il est associé, ce que Woodhouse et Hansen (1987) qualifient de "revenu immédiatement disponible". Le fait que le prix du crédit soit déterminé dans le contexte d'un marché qui diffère de celui où les produits associés sont achetés appuie ce point de vue.

Toute question concernant ce texte peut être adressée à l'auteur, Larry MacDonald, Section centrale de recherche, Division des prix, 13^e étage, édifice Jean Talon, Ottawa, K1A 0T6.

The cost of good and cost of credit approaches are not necessarily mutually exclusive. A mixture of both approaches may be used in the CPI at the same time. In particular, the following possibilities exist.

First, the cost of good approach could be followed for all types of credit except for the class of credit comprised of credit cards and credit raised on one good to buy another. This latter kind of credit has a weaker association with the specific goods acquired; it is possible to see it as chiefly supplying 'immediately available disposable income', and so the cost of credit approach could have greater applicability. Practical considerations are also a factor: it would be extremely difficult, if not impossible, to associate this kind of credit with the items purchased on credit.

A second possibility is that the cost of good approach could be used for mortgage credit while the cost of credit approach could be used for non-mortgage credit. It is rare for the consumer to pay for a dwelling entirely with cash: mortgage credit is usually an integral part of gaining ownership. For less expensive goods, the consumer is not usually compelled to assume debt: there is an element of choice involved. This element of choice enables non-mortgage credit to be treated as a separate good. Supplementing this position are practical considerations: one price index for non-mortgage credit is easier to calculate than several smaller ones, and the location of non-mortgage credit in the CPI may likely have little impact on the All-items CPI.

The U.S. Bureau of Labor Statistics (BLS) follows a cost of good method, although only with respect to automobiles. Mortgage costs are not included in the U.S. CPI because the rental equivalence concept is used for the owned accommodation component. The price fluctuations of remaining durables are measured using purchase prices.

While BLS statisticians agree that credit provides something distinct from the acquired goods and services, they disagree with its admission into the CPI as a separate category. In their opinion, a borrowing opportunity provides a means for intertemporal reallocation of lifetime expenditure constraints, and as such, it is not a good which can be rationalized in a one period index like the CPI. Greenless (1984) adds that the costs of moving consumption from the future to the present are to be ignored in the CPI, just as the returns from transferring consumption to the future, i.e. saving, are ignored.

U.K. price statisticians follow a cost of good approach with respect to mortgage credit charges, including them as part of the index for owned accommodation. House buyers are usually compelled to assume a mortgage, so that mortgage costs can be viewed as an integral part of house buying. However, non-mortgage credit charges are not included as part of the cost of purchasing non-housing goods because purchase of these goods does not necessarily require taking on debt. A separate entry for non-mortgage interest payments is granted on conceptual grounds, but practical problems (see section following the next) rule out an index.

Government statisticians in Australia and New Zealand follow a mixed approach, entering mortgage costs as part of housing costs and non-mortgage credit costs separately from associated goods. The reason for the treatment of mortgage costs in these countries is similar to the one used in the U.K. Their selection of a separate category for non-mortgage credit appears to largely reflect practical considerations: one separate index is easier to calculate than several small ones.

Les approches fondées sur le coût du bien et celui du crédit ne s'excluent pas nécessairement mutuellement. Dans le contexte de l'IPC, on peut avoir recours en même temps à ces deux approches. En particulier, mentionnons les possibilités suivantes.

Premièrement, on peut utiliser l'approche fondée sur le coût du produit pour tous les types de crédit sauf la catégorie des cartes de crédit et du crédit obtenu à partir d'un bien pour l'achat d'un autre bien. Ce type de crédit est moins étroitement lié aux biens spécifiques acquis; il est possible d'envisager que ce type de crédit fournit surtout "un revenu immédiatement disponible". Dans ce contexte, l'approche fondée sur le coût du crédit pourrait avoir une plus grande applicabilité. Des considérations d'ordre pratique entrent également en ligne de compte: il serait extrêmement difficile, sinon impossible, d'associer ce type de crédit aux articles achetés à crédit.

Deuxièmement, on peut se servir de l'approche fondée sur le coût du bien dans le cas du crédit hypothécaire tandis que celle fondée sur le coût du crédit peut être utilisée pour le crédit non hypothécaire. Il est rare qu'un consommateur paie entièrement un logement en argent comptant: le crédit hypothécaire est généralement un élément de l'accès à la propriété. Pour ce qui est des biens moins dispendieux, le consommateur n'est généralement pas obligé de contracter une dette: il s'agit d'une question de choix. Ce qui explique que le crédit non hypothécaire soit considéré comme un bien distinct. Des considérations d'ordre pratique soutiennent ce point de vue: il est plus facile de calculer un indice des prix du crédit non hypothécaire que plusieurs indices plus petits et la place du crédit non hypothécaire dans l'IPC influerait vraisemblablement peu sur l'IPC d'ensemble.

Le Bureau of Labor Statistics (BLS) des États-Unis a opté pour une méthode fondée sur le coût du produit, mais seulement en ce qui a trait aux automobiles. L'IPC américain ne tient pas compte des coûts hypothécaires car l'on y utilise le concept de l'équivalence en valeur locative pour ce qui est de la composante du logement en propriété. Les fluctuations de prix des autres biens durables sont mesurées au moyen des prix d'acquisition.

Bien que les statisticiens du BLS conviennent que le crédit fournit un élément distinct des biens et services acquis, ils ne sont pas d'accord pour en faire une catégorie de l'IPC. À leurs yeux, un emprunt constitue une façon de réaffecter dans le temps les contraintes de dépenses pour la durée d'une vie et, en ce sens, il ne constitue pas un bien qui peut être rationalisé dans le contexte d'un indice se rapportant à une période donnée comme l'IPC. Greenless (1984) ajoute qu'il ne faut pas tenir compte dans l'IPC des coûts de réaffectation, d'une période future à la période actuelle, de la consommation, de la même façon que l'on laisse de côté les revenus qui découlent du transfert dans le futur de la consommation, c'est-à-dire l'épargne.

Les statisticiens du Royaume-Uni responsables des prix ont adopté une méthode fondée sur le coût du bien en ce qui a trait aux frais de crédit hypothécaire, en les incluant dans l'indice du logement en propriété. Les personnes qui font l'achat d'une maison sont généralement obligées de prendre une hypothèque de sorte que les frais d'hypothèque peuvent être envisagés comme faisant partie de l'achat d'une maison. Toutefois, les frais de crédit non hypothécaire ne sont pas rattachés au coût d'acquisition de biens non immobiliers car l'achat de ces biens ne signifient pas nécessairement qu'il faille contracter une dette. Du point de vue conceptuel, on peut constituer une entrée séparée pour le crédit non hypothécaire mais il est hors de question d'établir un indice en raison de problèmes pratiques (voir la section qui suit la prochaine).

Les statisticiens gouvernementaux de l'Australie et de la Nouvelle-Zélande ont adopté une approche mixte, en ce sens qu'ils rattachent les coûts hypothécaires aux frais de logement mais qu'ils dissocient le crédit non hypothécaire des biens auxquels il se rapporte. Les frais hypothécaires sont ainsi traités de cette façon dans ces pays pour la même raison que celle invoquée par le Royaume-Uni. Il semble qu'ils aient opté pour une catégorie distincte en ce qui concerne le crédit non hypothécaire en majeure partie pour des considérations d'ordre pratique: il est plus facile de calculer un indice distinct que plusieurs petits indices.

Choice Between the Acquisition and Expenditure Approaches

A price index for credit can be derived using either the acquisition (purchase) approach or the expenditure (money outlay) approach. In the former case, the index is supposed to measure price-attributed changes in the cost of servicing debt that was acquired at a certain reference period, hence only current interest rates (and current commodity prices) are used in its calculation. In the latter case, the index is supposed to measure price-attributed changes in the cost of servicing debt that was outstanding at a certain reference period, hence moving averages of current and past interest rates (and commodity prices) are used in the index calculation.

The choice between the two approaches can be based on several criteria. One criterion is consistency with the approach used for other CPI components. The expenditure approach for non-mortgage credit would appear to improve the internal consistency of the CPI if mortgage credit is already included in the CPI - as in Canada - according to the expenditure approach. However, non-housing goods in the CPI are measured according to the acquisition approach, so it might be better to measure non-mortgage credit consistently with the goods on which it is used, that is, according to the acquisitions approach.

A more germane criterion seems to be consistency with the main purpose of the CPI. If the main purpose of the CPI is to serve as a monitor of current price changes, the acquisition approach would be more relevant since it is based on only current interest rates. If the main purpose of the CPI is to serve as a measure of price-induced changes in the purchasing power of incomes (e.g. for indexation purposes), the expenditure approach would be more relevant since it includes all outlays on credit - see Turvey (1981), (1986), and Statistics Canada's The Consumer Price Index Reference Paper (updatings based on 1978, 1982 and 1986 expenditures).

If the price terms are based on an average of current and past interest rates, as in the case of the expenditure approach, then consistency requires an index weight which incorporates the current and past interest rates of the reference period. Such a weight is found in the Family Expenditure Survey. If the price terms are based only on current interest rates, as in the case of the acquisitions approach, the Family Expenditure Survey weight would be inappropriate and some estimation would be required to remove the amount due to loans contracted prior to the reference period.

Positions adopted in the surveyed countries exhibit quite a diversity. For the non-mortgage credit index, Australia uses the expenditure approach, New Zealand uses the acquisition approach and the U.K. uses neither because non-mortgage credit is excluded on conceptual grounds in the framework of the cost of good approach and on practical grounds in the framework of the cost of credit approach. The U.S. uses current interest rates in its automobile credit index, but employs a rationale different from the acquisitions approach.

U.S. price statisticians seek to price the flow of services derived from a durable good using rental data, or else, the estimated opportunity costs of using the asset. For the latter, the principal costs would be operating expenses, foregone interest on equity, and the opportunity cost of debt. The latter is defined as the current loan rate.

Developmental work has been undertaken within the U.S. BLS to bring about a new auto finance index. The proposed index is designed to be consistent with the

Le choix entre les approches fondées sur les acquisitions et les dépenses

En ce qui a trait au crédit, on peut élaborer un indice des prix en se fondant soit sur la méthode des acquisitions (achat) ou des dépenses (débours). Dans le premier cas, l'indice est censé mesurer les variations attribuables au prix au titre du coût du service de la dette acquise pendant une certaine période de référence, ce qui signifie que seuls les taux d'intérêt courants (et les prix courants des produits) entrent en ligne de compte. Dans le deuxième cas, l'indice est censé mesurer les variations attribuables au prix au titre du coût du service de la dette non remboursée pendant une certaine période de référence, ce qui signifie que l'on se sert de moyennes mobiles des taux d'intérêt courants et antérieurs (et des prix des produits) pour calculer l'indice.

Le choix entre ces deux approches peut être fondé sur plusieurs critères. L'un de ces critères est la concordance avec l'approche utilisée pour calculer d'autres composantes de l'IPC. L'approche fondée sur les dépenses dans le cas du crédit non hypothécaire semble favoriser la cohérence interne de l'IPC si le crédit hypothécaire en fait déjà partie - comme cela est le cas au Canada - suivant la méthode des dépenses. Toutefois, les biens non immobiliers de l'IPC sont évalués suivant l'approche des acquisitions, de sorte qu'il serait peut-être préférable de mesurer le crédit non hypothécaire conformément aux biens auxquels il se rapporte. c'est-à-dire en se fondant sur la méthode des acquisitions.

La conformité avec l'objet principal de l'IPC semble être un critère plus pertinent. Si l'IPC vise surtout à rendre compte des fluctuations courantes des prix, l'approche des acquisitions est plus pertinente car elle est fondée sur les seuls taux d'intérêt courants. Si l'objet principal de l'IPC est d'évaluer les fluctuations attribuables aux prix du pouvoir d'achat des revenus (exemple, à des fins d'indexation), il vaut mieux adopter la méthode des dépenses étant donné qu'elle inclut tous les débours au titre du crédit - voir Turvey (1981), (1986), et le Document de référence de l'indice des prix à la consommation de Statistique Canada (mises à jour fondées sur les dépenses de 1978, 1982 et 1986).

Si les prix sont basés sur une moyenne des taux d'intérêt courants et antérieurs, comme dans le cas de la méthode fondée sur les dépenses, il faut alors, pour être cohérent, élaborer une pondération d'indices qui tienne compte des taux d'intérêt courants de la période de référence et antérieurs à celle-ci. Ce type de pondération se retrouve dans l'enquête sur les dépenses des familles. Si les prix sont basés seulement sur les taux d'intérêt courants, comme dans le cas de l'approche fondée sur les acquisitions, la pondération de l'enquête sur les dépenses des familles ne convient pas et il faut élaborer une estimation pour éliminer le montant attribuable à des emprunts contractés avant la période de référence.

À cet égard, les points de vue adoptés dans les pays susmentionnés sont très différents. En ce qui a trait à l'indice du crédit non hypothécaire, l'Australie utilise la méthode fondée sur les dépenses, la Nouvelle-Zélande, celle fondée sur les acquisitions, et le Royaume-Uni n'utilise ni l'une ni l'autre de ces méthodes car on n'y tient pas compte, pour des raisons conceptuelles, du crédit non hypothécaire dans le contexte de l'approche fondée sur le coût du produit et, pour des raisons pratiques, dans le contexte de l'approche fondée sur le coût du crédit. Les États-Unis utilisent les taux d'intérêt courants dans l'indice du crédit automobile mais leur raisonnement diffère de l'approche fondée sur les acquisitions.

Les spécialistes américains de la statistique des prix tentent d'établir le prix du flux des services obtenus d'un bien durable en se servant des données obtenues sur la location, ou des coûts d'opportunité estimés de l'utilisation du bien en question. Dans ce dernier cas, les coûts principaux sont les dépenses d'exploitation, l'intérêt auquel on a renoncé sur l'avoir et le coût d'opportunité de la dette. Ce dernier est défini comme étant le taux d'intérêt courant.

Aux États-Unis, les spécialistes du BLS ont entrepris des travaux préparatoires en vue d'élaborer un nouvel indice du financement automobile. L'indice proposé est conçu pour cor-

Bureau's concept of the user-cost variant of the flow of services approach. The plan is to set the index weight equal to the amount of interest that would have been paid on outstanding debt valued at the interest rate of the reference period. Such a weight is justified as the opportunity cost of the reference period stock of cars: it is the amount that would be paid if the stock of cars had been sold and refinanced.

Two analysts from the BLS, Blanciforti and Galvin (1984), calculated some prototype user-cost indexes for cars, based on the above rationale. The index movements displayed extreme volatility. For example, the quarterly indexes plunged from the 150 region in the first quarter of 1981 to the 50 area in the second quarter of the year, followed by a sharp escalation to the 125 region in the third quarter. Such movements are unusual for price indexes and suggest difficulties with the Bureau's concept of user-cost or with the Blanciforti and Galvin calculations.

Katz (1983) notes that use of current period rates as the opportunity cost of debt would only be appropriate if the opportunity to sell or rent the asset actually existed. If the resale or rental market is not well developed, then current rates are not valid. Instead, purchase period rates should be used, which entails that the credit index should be based on current and past interest rates. Some may argue that cars be included in this category, since car rental and resale markets may not qualify as well-developed.

Choice Between Gross and Net Interest Approaches

The gross interest approach uses the full amount of interest payments in index calculations, while the net interest approach uses only part of interest payments in the index calculations. The justification of the gross interest approach is based on the perception that the whole of interest payments constitutes a cost to consumers. The justification of the net interest approach, on the other hand, is based on the perception that some parts of interest payments constitute transfers and, as such, are out of the CPI context.

There are two versions of the net interest approach. The first version is based on a division of interest payments into two components: one that goes to financial intermediaries and one that is passed on through the intermediaries to depositors. The former is deemed final consumption while the latter is deemed a transfer. As such, only the final consumption component (along with service charges) has a place within the CPI; the transfer component should be netted out.

According to the first version, credit would acquire an independent status in the CPI and cease to be linked to other goods and services as the 'cost of servicing debt required to purchase a fixed list of goods and services'. It would be measured as the price change associated with the services provided by financial intermediaries. However, calculation of the actual price index remains problematic because the majority of the cost of the intermediation service remains hidden in total interest payments. In light of the difficulty of associating prices with quantity units, one could consider excluding intermediation services, much in the same way as other items - such as life insurance - are left out.

The second version of the net interest rate concept is based on a division of interest rates into two different components: one that goes to financial intermediaries and non-consumer depositors and one that goes to

respondre au concept du Bureau qui est une variante du coût d'usage de la méthode fondée sur le flux des services. Le plan consiste à faire en sorte que la pondération de l'indice équivale au montant de l'intérêt qui aurait été payé au titre de la dette non remboursée évaluée au taux d'intérêt de la période de référence. Une telle pondération s'identifie au coût d'opportunité du stock d'automobiles de la période de référence: il s'agit du montant qui serait versé si le stock d'automobiles avait été vendu et refinancé.

Deux analystes du BLS, Blanciforti et Galvin (1984), ont calculé certains prototypes d'indice du coût d'usage des automobiles, en se fondant sur le raisonnement qui précède. Les mouvements de ces indices ont été très instables. Par exemple, les indices, qui s'établissaient aux alentours de 150 au premier trimestre de 1981, sont tombés à près de 50 au deuxième trimestre de la même année, et sont par la suite brusquement remontés aux environs de 125 pendant le troisième trimestre. De tels mouvements sont inhabituels dans le cas d'indices de prix et laissent croire qu'il y a des difficultés liées au concept du coût d'usage du Bureau ou aux calculs de Blanciforti et Galvin.

Katz (1983) a fait remarquer qu'on ne peut utiliser les taux des périodes courantes en guise de coût d'opportunité de la dette que dans les cas où l'opportunité de vendre ou de louer le bien existe véritablement. Si les marchés de la revente ou de la location ne sont pas bien développés, les taux courants ne sont alors pas valides. Il faudrait plutôt utiliser les taux de la période d'achat ce qui signifie que l'indice du crédit devrait être fondé sur les taux d'intérêt courants et antérieurs. Certains pourraient soutenir que les automobiles devraient faire partie de cette catégorie étant donné qu'on ne peut affirmer que les marchés de la location et de la revente des automobiles soient bien développés.

Le choix entre les approches fondées sur l'intérêt brut et l'intérêt net

Dans l'approche fondée sur l'intérêt brut, on tient compte, dans le calcul de l'indice, du plein montant des paiements d'intérêt, tandis que dans celle fondée sur l'intérêt net, on ne tient compte que d'une partie de ces paiements. La première approche se justifie du fait que l'on considère que l'ensemble des paiements d'intérêt constitue un coût que les consommateurs doivent assumer. D'autre part, la deuxième approche se justifie du fait que certaines portions des paiements d'intérêt sont considérées comme des transferts et, par conséquent, ne peuvent entrer en ligne de compte dans le contexte de l'IPC.

Il existe deux versions de la méthode fondée sur l'intérêt net. La première est basée sur la division en deux composantes des paiements d'intérêt: ceux qui sont versés à des intermédiaires financiers et ceux qui sont transmis aux déposants par ces intermédiaires. La première est assimilée à une consommation finale tandis que la dernière est considérée comme un transfert. Comme telle, seule la composante de la consommation finale (de même que les frais du service) ont une place au sein de l'IPC; il ne faut pas tenir compte de la composante du transfert.

Conformément à la première version, le crédit occuperait une place à part dans l'IPC et cesserait d'être rattaché à d'autres biens et services à titre de "coût du service de la dette requis pour acquérir une liste fixe de biens et de services". Il serait mesuré comme étant la variation de prix associée aux services fournis par les intermédiaires financiers. Toutefois, le calcul en soi de l'indice de prix pose un problème car la majeure partie du coût du service d'intermédiation demeure cachée dans le total des paiements d'intérêt. Compte tenu de la difficulté d'associer les prix à des unités quantitatives, on peut envisager l'exclusion du service d'intermédiation, de la même façon que l'on exclut d'autres articles - notamment l'assurance-vie.

La deuxième version du concept du taux d'intérêt net est basée sur la division en deux composantes distinctes des taux d'intérêt: ceux qui sont versés aux intermédiaires financiers et aux déposants non consommateurs et ceux qui sont versés aux

consumer depositors. Whereas the first version is seen as yielding consistency with the concept of interest prevalent in the national accounts, the second version is seen as more consistent with the framework of a CPI whose main purpose is to serve as a measure of price-induced changes in the purchasing power of consumers. Since changes in interest flows paid by consumers to consumers as savers have no impact on the purchasing power of the consumer group, these interest flows should be excluded from the CPI. Since changes in interest flows paid by consumers to intermediaries and depositors from the business, government and foreign sectors do have an impact on the purchasing power of the consumer group, these interest flows should be included in the CPI.

Of the countries surveyed, only the U.K. appears to have considered the possibility of net interest rates. U.K. statisticians accept the equivalent of the first version of the net interest concept, allowing on a conceptual basis the cost of financial intermediary services into the CPI. However, for mortgage credit, the U.K. still holds to a gross interest concept. This then raises a question: why is mortgage interest received by a given class of depositors not viewed as a transfer, while non-mortgage interest received by a given class of depositors is viewed as a transfer?

Choice Between Real and Nominal Interest Rates

Frequently, a distinction is made between nominal and real interest rates. Nominal rates are the rates visible to consumers while real rates are equal to nominal rates less the inflation rate. Nominal rates might be used in the CPI because they are what consumers regard as their costs. Real rates might be used because they may be interpreted as the true or actual costs to the consumer.

The case for viewing the real interest rate as the true cost to the consumer is based on the observation that the disposable income exchanged between borrower and lender is typically paid back over time, making it subject to the vagaries of inflation. The true receipts to the lender will therefore be the interest received less the decline in the real value of the disposable income returned. Similarly, the true cost to the borrower will be the interest paid less the decline in the real value of disposable income avoided (due to earlier possession of the disposable income).

There are two concepts of real interest rates: *ex ante* and *ex post*. The *ex ante* rate is equal to the nominal rate less the anticipated inflation rate. The *ex post* rate is equal to the nominal rate less the actual inflation which occurs over the life of the loan.

Both concepts of the real interest rate pose virtually insurmountable measurement challenges. For the *ex ante* rate, there is no objective way of determining the amount of the 'inflation premium' built into the nominal rate. For the *ex post* rate, the current period cost of credit could not be determined in the current period: its determination would have to wait until subsequent periods. In light of these difficulties, it is not surprising that none of the surveyed countries use real interest rates.

dépôts consommateurs. Tandis que l'on considère que la première version se conforme au concept de l'intérêt qu'on a adopté dans les comptes nationaux, la deuxième est plus conforme au contexte de l'IPC dont l'objet principal est de mesurer les variations attribuables aux prix du pouvoir d'achat des consommateurs. Étant donné que les variations des flux d'intérêt payés par des consommateurs à des consommateurs en tant qu'épargnants n'influent pas sur le pouvoir d'achat de l'ensemble des consommateurs, ces flux d'intérêt devraient être exclus de l'IPC. Étant donné que les variations des flux d'intérêt payés par des consommateurs à des intermédiaires et à des déposants des secteurs commercial, administratif ou étranger influent sur le pouvoir d'achat de l'ensemble des consommateurs, ces flux d'intérêt devraient être inclus dans l'IPC.

Parmi les pays étudiés, seul le Royaume-Uni semble avoir envisagé la possibilité des taux d'intérêt nets. Les statisticiens de ce pays ont adopté l'équivalent de la première version du concept de l'intérêt net, en acceptant de tenir compte dans l'IPC, sur une base conceptuelle, du coût des services intermédiaires financiers. Toutefois, en ce qui a trait au crédit hypothécaire, le Royaume-Uni s'en tient toujours au concept de l'intérêt brut. Ce qui nous amène donc à poser la question suivante: pourquoi l'intérêt hypothécaire reçu par une catégorie de déposants donnée n'est-il pas considéré comme un transfert, comme cela est le cas pour l'intérêt non hypothécaire?

Le choix entre les taux d'intérêt réels et nominaux

Souvent, on établit une distinction entre les taux d'intérêt nominaux et réels. Les taux nominaux sont les taux qui sont visibles du point de vue des consommateurs tandis que les taux réels équivalent aux taux nominaux moins le taux d'inflation. Les taux nominaux peuvent être utilisés dans l'IPC car il s'agit de ce que les consommateurs considèrent comme leurs coûts. Les taux réels peuvent être utilisés car on peut les interpréter comme étant les coûts véritables ou actuels que doit assumer le consommateur.

On considère le taux d'intérêt réel comme étant le vrai coût que le consommateur doit assumer en se fondant sur l'observation que le revenu disponible échangé entre l'emprunteur et le prêteur est généralement remboursé avec le temps, ce qui fait qu'il est soumis aux caprices de l'inflation. Pour calculer les véritables rentrées du prêteur, il faut donc soustraire de l'intérêt reçu la baisse de la valeur réelle du revenu disponible remboursé. De la même façon, pour déterminer le vrai coût de l'emprunteur il faut soustraire de l'intérêt remboursé la baisse de la valeur réelle du revenu disponible remis (à cause de la possession précédente du revenu disponible).

Il existe deux concepts des taux d'intérêt réels: le taux *ex ante* et le taux *ex post*. Le premier équivaut au taux nominal moins le taux moins d'inflation prévue. Le deuxième équivaut au taux nominal moins l'inflation véritable pendant la durée du prêt.

Ces deux concepts du taux d'intérêt réel posent des problèmes de mesure pratiquement insurmontables. Dans le cas du taux *ex ante*, il n'existe pas de façon objective de déterminer le montant de la "prime d'inflation" qui fait partie du taux nominal. Dans le cas du taux *ex post*, le coût du crédit de la période courante ne peut être déterminé pendant la période courante: il faut attendre des périodes subséquentes. Compte tenu de ces difficultés, il n'est pas surprenant qu'aucun des pays susmentionnés ne se serve des taux d'intérêt réels.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

| Major components | Weights 1982 | Weights 1986 |
|--|----------------------|----------------------|
| Composantes principales | Pondérations 1982 | Pondérations 1982 |
| All-items - Ensemble | 100.00(1) | 100.00(1) |
| Food - Aliments | 20.02 | 18.05 |
| Housing - Habitation | 38.14 | 36.32 |
| Clothing - Habillement | 8.37 | 8.69 |
| Transportation - Transports | 15.75 | 18.29 |
| Health and personal care - Santé et soins personnels | 4.02 | 4.20 |
| Recreation, reading and education - Loisirs, lecture et formation | 8.25 | 8.84 |
| Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées | 5.45 | 5.60 |

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves com-

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux

pounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be

de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en

used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

CITY AVERAGE RETAIL PRICESIntroduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

PRIX DE DÉTAIL MOYENS PAR VILLEIntroduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix Moyens peut être obtenu en communiquant avec la Division des prix.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 23 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.(1)

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

| | | |
|---------------|---|-----------|
| St. John's | - | Halifax |
| Charlottetown | - | Halifax |
| Saint John | - | Halifax |
| Ottawa | - | Halifax |
| Toronto | - | Montréal |
| Ottawa | - | Toronto |
| Toronto | - | Winnipeg |
| Regina | - | Winnipeg |
| Edmonton | - | Winnipeg |
| Edmonton | - | Vancouver |

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

(1) See Table 15 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 23 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville(1) pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

| | | |
|---------------|---|-----------|
| St. John's | - | Halifax |
| Charlottetown | - | Halifax |
| Saint John | - | Halifax |
| Ottawa | - | Halifax |
| Toronto | - | Montréal |
| Ottawa | - | Toronto |
| Toronto | - | Winnipeg |
| Regina | - | Winnipeg |
| Edmonton | - | Winnipeg |
| Edmonton | - | Vancouver |

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

(1) Voir tableau 15 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Footnotes for Table 23

- (2) The weights shown are rounded 1986 weights as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1986 Expenditures** (Occasional), Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1986.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Notes pour le tableau 23

- (2) Les poids indiqués sont les poids arrondis pour 1986 figurant dans **Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986** (hors-série), n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1986.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

| Principal commodity group | Number of items priced (if available) |
|---------------------------------------|---------------------------------------|
| Food at home | 104 |
| Meals away from home | 9 |
| Household maintenance and services | 11 |
| Household supplies | 8 |
| Communications | 3 |
| Domestic help (depending on location) | 2-8 |

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

| Groupe principal de produits | Nombre d'articles dont le prix est relevé (lorsque disponibles) |

What happened to the cost of living last month?

The **Consumer Price Index** will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), the **Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic beverages
- housing

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of changes.

Get the facts.

Subscribe to the **Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$89 in Canada, and \$107 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur :

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changements.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 89 \$ au Canada et 107 \$ à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

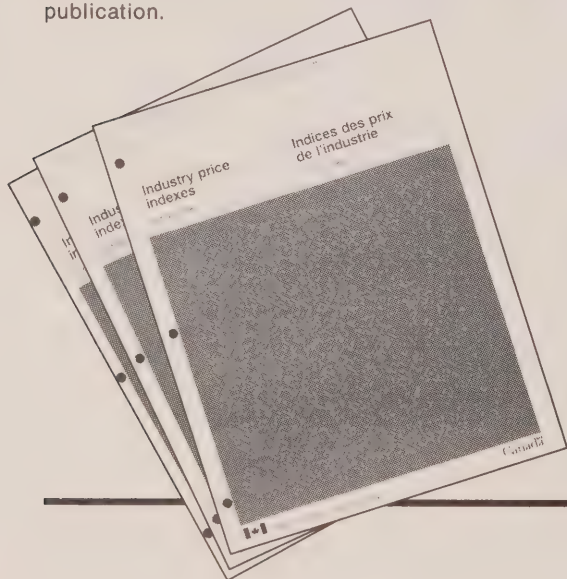

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail, **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$173 in Canada, and \$208 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 173 \$ au Canada et 208 \$ à l'étranger.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

HIGHLIGHTS

Consumer Price Behaviour

Fourth Quarter, 1989

Trends in the All-items Index

Between September and December 1989 (fourth quarter), the All-items Consumer Price Index (CPI) for Canada rose by 1.0% in seasonally adjusted terms. This rate of increase was identical to that reported for the third quarter. Within the fourth quarter, November had the largest seasonally adjusted monthly increase at 0.5%.

In non-seasonally adjusted terms, the All-items index rose by 0.7% in the latest quarter, compared to an advance of 0.9% in the third quarter. The increases in the latter half of the year were considerably lower than those of 1.6% and 1.9% observed in the first and second quarters respectively. The average of 12-month increases for the fourth quarter was 5.1%, down from the 5.3% rise reported for the third quarter.

Major Contributors to the Fourth Quarter Change

As indicated above, the All-items index advanced by 0.7% in unadjusted terms between September and December. The increase was made up of a rise of 0.9% in the index for All-items excluding Food, the effect of which was offset to a small extent, by a fall of 0.3% in the Food index.

Of the six major non-food components of the CPI, five registered increases ranging from 1.0% for Recreation, Reading and Education to 1.4% for Health and Personal Care. The overall upward impact was moderated partially by a fall of 1.1% in the Clothing index.

The largest impact on the 0.7% rise in the All-items index resulted from an increase of 1.2% in the Housing index. This was followed by a noticeably smaller impact due to a rise of 1.1% in the Transportation index. Increases in each of the Recreation, Reading and Education index (1.0%), the Tobacco Products and Alcoholic Beverages index (1.1%) and the Health and Personal Care index (1.4%) explained a relatively small proportion of the overall change.

Much of the 1.2% rise in the Housing index in the latest quarter was attributable to an increase of 2.7% in the Owned Accommodation index. Annual increases in property taxes, followed by advances in mortgage interest costs and in the prices of new homes accounted for most of the rise in owned accommodation charges. Rented accommodation charges rose as well, as did rates for fuel oil, piped gas and electricity. Child care charges rose in the quarter and higher prices were observed for selected household cleaning products, paper products, furniture, mattresses and tableware. The rise in the Housing index was dampened, to some extent by lower long-distance telephone rates and seasonal declines on hotel/motel accommodation charges.

The Transportation index was up 1.1% in the fourth quarter with most of the impact concentrated in a 0.9% rise in the Private Transportation component. The latter was dominated by higher prices for the 1990-model automobiles, followed by increases in parking rates, insurance premiums and automobile registration fees. At the same time, a fall in gasoline prices, largely attributable to price wars occurring in some cities of Ontario and Saskatchewan, and a drop in automobile rental charges exerted a major moderating influence. The Public Transportation index rose by 2.5% with most of the increases associated with higher air fares. A 5.5% rise in highway bus fares also contributed moderately to this increase.

FAITS SAILLANTS

Comportement des prix à la consommation

Quatrième trimestre, 1989

Tendances de l'indice d'ensemble

Entre septembre et décembre 1989 (quatrième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation pour le Canada a progressé de 1.0%. Cette hausse est identique à celle déclarée pour le troisième trimestre. Au quatrième trimestre, la plus grande augmentation mensuelle désaisonnalisée s'est produite en novembre (0.5%).

L'indice d'ensemble non désaisonnalisé s'est accru de 0.7% au cours du dernier trimestre, en comparaison d'une progression de 0.9% au troisième trimestre. Les augmentations de la deuxième moitié de l'année ont été considérablement inférieures à celles de 1.6% et de 1.9% enregistrées respectivement au premier et au deuxième trimestre. La moyenne des hausses sur 12 mois pour le quatrième trimestre s'établissait à 5.1%, en baisse par rapport à l'augmentation de 5.3% déclarée au troisième trimestre.

Principaux facteurs de la variation au quatrième trimestre

Comme on l'a noté ci-dessus, l'indice d'ensemble non désaisonnalisé a progressé de 0.7% entre septembre et décembre. Cette hausse découlait d'une augmentation de 0.9% de l'indice d'ensemble sans les aliments, compensée dans une faible mesure par une diminution de 0.3% de l'indice des aliments.

Des six principales composantes non alimentaires de l'IPC, cinq ont enregistré des augmentations allant de 1.0% pour les loisirs, la lecture et la formation à 1.4% pour la santé et les soins personnels. Dans l'ensemble, l'effet d'entraînement a été partiellement compensé par une diminution de 1.1% de l'indice de l'habillement.

La cause la plus importante de la hausse de 0.7% de l'indice d'ensemble est attribuable à l'augmentation de 1.2% de l'indice de l'habitation. Vient ensuite une progression de 1.1% de l'indice des transports qui a eu un effet beaucoup moins marqué. Les hausses des indices des loisirs, de la lecture et de la formation (1.0%), des produits du tabac et des boissons alcoolisées (1.1%) et de la santé et des soins personnels (1.4%) contribuent dans une mesure relativement faible à la variation globale.

La progression de 1.2% de l'indice de l'habitation au cours du dernier trimestre est attribuable principalement à un relèvement de 2.7% de l'indice du logement en propriété. La majoration des frais de logement en propriété s'explique surtout par des hausses annuelles des taxes foncières, et également par l'augmentation du coût des intérêts hypothécaires et du prix des maisons neuves. Les frais de logement en location ont également progressé, tout comme le prix du mazout, du gaz canalisé et de l'électricité. Au cours de ce trimestre, on a également observé des augmentations des dépenses pour les soins d'enfants et des prix de certains produits d'entretien ménager, articles en papier, meubles, matelas et articles de table. La diminution des tarifs des appels interurbains et la baisse saisonnière des chambres d'hôtel/motels a exercé, dans une certaine mesure, un effet modérateur sur la montée de l'indice de l'habitation.

L'accroissement de 1.1% de l'indice des transports au quatrième trimestre est attribuable en majeure partie à la hausse de 0.9% de la composante du transport privé. La majoration du prix des automobiles de modèle 1990 est le principal facteur de celle-ci, suivie du relèvement des taux de stationnement, des primes d'assurance-automobile et des frais d'immatriculation. Parallèlement, une diminution du prix de l'essence, attribuable en majeure partie aux guerres des prix dans certaines villes de l'Ontario et de la Saskatchewan, ainsi qu'une baisse des frais de location d'automobile ont exercé un effet modérateur important. L'indice des transports publics a progressé de 2.5% en raison surtout du renchérissement des tarifs aériens. La hausse de 5.5% des tarifs d'autocar a également contribué, de façon modérée, à ce mouvement ascendant.

The sources contributing to the 1.0% rise in the Recreation, Reading and Education index were widely dispersed. The Recreation index rose 1.0%, as the more important contributions resulted from higher fees for the use of recreational facilities and increased admission charges to sporting events and theatre productions. The Reading index climbed by 1.1%, due to higher prices for newspapers. The Education index also rose 1.0%, as higher tuition fees for private lessons were reported.

Increases in the Tobacco Products and Alcoholic Beverages index (1.1%) and the Health and Personal Care index (1.4%) each added modestly to the overall rise in the All-items index. The former rose in response to higher cigarette and beer prices. The latter reflected sharp increases in the prices of non-prescribed medicines and selected personal care supplies. Charges associated with hair-grooming services also posted noticeable increases.

The declines registered in the Clothing index (-1.1%) and in the Food index (-0.3%) contributed to some moderating of the overall 0.7% rise in the All-items index. In the former index declines of 1.8% were observed in the Women's Wear index, 1.1% in the Men's Wear index and 3.9% in the Clothing Materials index. A small part of this downward pull was offset by higher charges for clothes laundering services. The Clothing index fell in the months of November and December, largely due to extensive promotional activity.

The 0.3% fall in the Food index resulted from a drop of 0.7% in the index for Food Purchased from Stores, the effect of which was offset, in part, by a rise of 1.0% in the index for Food Purchased from Restaurants. Relatively sharp declines in the prices of soft drinks, fresh fruit, poultry, fish, pork, coffee and tea were the main contributors to the fall in the index for Food Purchased from Stores. At the same time, higher prices were observed for ready-cooked meat, cured meat, low fat milk, breakfast cereal, selected fresh vegetables and canned soup. The downward pressure on food prices was evident both in November and in December.

Les causes de l'augmentation de 1.0% de l'indice des loisirs, de la lecture et de la formation sont très variées. En ce qui a trait au relèvement de 1.0% de l'indice des loisirs, il est surtout attribuable à l'augmentation des frais pour les activités de loisirs et des droits d'entrée pour des événements sportifs et des pièces de théâtre. L'indice de la lecture a progressé de 1.1% à cause de l'augmentation du prix des journaux. L'augmentation des frais pour les leçons privées a entraîné une hausse de 1.0% de l'indice de la formation.

Les hausses de l'indice des produits du tabac et des boissons alcoolisées (1.1%) et de l'indice de la santé et des soins personnels (1.4%) ont contribué chacune faiblement à l'augmentation globale de l'indice d'ensemble. Le premier indice a augmenté à cause de la majoration du prix des cigarettes et de la bière. La montée du deuxième indice traduit les fortes hausses du prix des médicaments sans ordonnance et de certains produits de soins personnels. En outre, on a enregistré un accroissement sensible des frais associés aux services de coiffure.

Le recul de l'indice de l'habillement (-1.1%) et de l'indice des aliments (-0.3%) a exercé un certain effet modérateur sur l'augmentation globale de 0.7% de l'indice d'ensemble. Dans le cas du premier indice, on a observé des diminutions de l'indice des vêtements pour femmes (1.8%), de l'indice des vêtements pour hommes (1.1%) et de l'indice du tissu pour vêtement (3.9%). Cette tendance à la baisse a été neutralisée, dans une faible mesure, par le renchérissement des services de blanchissage des vêtements. Le recul de l'indice des vêtements enregistré en novembre et en décembre est surtout attribuable à la fréquence des activités promotionnelles.

La diminution de 0.3% de l'indice des aliments s'explique par la baisse de 0.7% de l'indice des aliments achetés au magasin, qui a été partiellement neutralisée par la hausse de 1.0% de l'indice des aliments achetés au restaurant. Des diminutions relativement fortes du prix des boissons gazeuses, des fruits frais, de la volaille, du poisson, du porc, du café et du thé sont à l'origine de la baisse de l'indice des aliments achetés au magasin. Parallèlement, on a observé une majoration du prix de la viande déjà cuite, des viandes de salaison, du lait à basse teneur en gras, des céréales de table, de certains légumes frais et des soupes en boîte. En novembre et en décembre, les prix des aliments ont manifestement subi une pression à la baisse.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagréé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

TABLE 2. Purchasing Power of the Consumer Dollar(1) Expressed in Cents, Compared to 1981, 1980-1989

RECENT TRENDS IN CONSUMER PRICE MOVEMENTS¹

A. INTRODUCTION

This article reviews the behaviour of the Consumer Price Index (CPI) and its principal components over the period January 1985 to December 1989. The review is based primarily on the percentage changes derived from comparing index levels of a given month with those of the same month the previous year. These 12-month changes are widely quoted by the public as "the annual rate of inflation".

Series comprising of 12-month changes are perceived as annual changes and are treated as automatically adjusted for seasonal effects. There is a high probability that such changes are, in fact, seasonally adjusted, since the period is short and the seasonal patterns are expected to remain stable. Thus 12-month changes will tend in large measure, to reflect the effects of irregular market events and the trend-cycle patterns of price change behaviour.

Irregular events in the market place cause deviations from a trend in price changes. These trends are generally phases of cycles of different lengths. Cyclical analysis over a short period does not produce reliable results. Hence, other than to make passing references to rising trends, falling trends, upturns and downturns, no attention will be directed to the cyclical behaviour over the period in question.

Some approximation of the linear trend over the entire period, January 1985 to December 1989, may be found in the average of 12-month changes. These are referred to as average annual rates. Deviations from these trends are also calculated and will be used to indicate the extent of the volatility of the changes over the period. Markets adjust in different ways and at different speeds to changes in demand-supply conditions and differences in the policy environment. The extent of the volatility in price changes may be indicative of, among other things, the extent of competition in the market.

A few interpretational difficulties associated with the use of 12-month changes need to be noted. Firstly, the event causing the most recent change could occur in the latest month or the same month of the previous year. Thus, changes for the months of 1985, must necessarily take into account factors impacting on price changes in the corresponding months of 1984. This adds to the complexity of identifying the cause of the price change. Secondly, a decline in this measure does not necessarily mean that absolute prices have fallen. More often it means that the rate of increase is smaller. Only in the exceptional case where the 12-month change is negative, could one conclude that the absolute price has fallen. Thirdly, a trend refers to a dominant steady increase (rising trend) or decrease (falling trend) in the rate of price change over a given period, usually in excess of one year. A turning-point in a trend could occur when 12-month price changes are positive or negative. Particular care is required when interpreting turning points where 12-month changes are negative.

B. TRENDS IN THE ALL-ITEMS INDEX

The All-items Consumer Price Index (CPI) for Canada is often used as an indicator of changes in the general price level or the "rate of inflation". Over the period January 1985 to December 1989, the All-items index advanced at an average annual rate of 4.3%. At the start of the period, the 12-month changes were slightly under 4.0% and remained within a relatively narrow range around 4.0% until 1989. In 1989, the CPI rose rapidly in the first half of the year, reaching a high of 5.4% in June and July. In the latter half of the year, the upward trend moderated slightly, averaging around 5.2%. Twelve-month increases in the CPI had climbed from 3.7% in the early part of 1985 to slightly over 5.0% towards the close of 1989.

LES MOUVEMENTS DES PRIX À LA CONSOMMATION: TENDANCES RÉCENTES¹

A. INTRODUCTION

Sont analysés dans le présent document les mouvements de l'indice des prix à la consommation (IPC) et de ses composantes principales qui sont survenus entre janvier 1985 et décembre 1989. L'analyse repose principalement sur les taux de variation obtenus en comparant les indices d'un mois donné à ceux du même mois de l'année précédente. Le public fait souvent référence à ces variations sur 12 mois comme étant "le taux annuel d'inflation".

Les séries composées de variations sur 12 mois sont considérées comme des variations annuelles et traitées comme automatiquement corrigées des effets saisonniers. Il est fort probable que ces variations soient en fait désaisonnalisées puisqu'elles couvrent une courte période et qu'on s'attend que les tendances saisonnières demeurent stables. Ainsi les variations sur 12 mois auront généralement tendance à refléter les effets d'événement irréguliers survenus sur le marché et les tendances-cycles des mouvements de prix.

Les événements irréguliers qui surviennent sur le marché provoquent des écarts par rapport à une tendance des variations de prix. En général, ces tendances sont des phases de cycles de différentes durées. Comme l'analyse de cycles couvrant une courte période ne donne pas des résultats fiables, nous ne nous arrêterons pas au comportement cyclique au cours de la période en question, sauf pour noter au passage les tendances à la hausse, les tendances à la baisse, et les augmentations et les diminutions.

Il est possible d'obtenir une approximation de la tendance linéaire au cours de la période toute entière, soit de janvier 1985 à décembre 1989, à partir de la moyenne des variations sur 12 mois, lesquelles sont appelées "taux annuels moyens". Les écarts par rapport à ces tendances sont aussi calculés et serviront à indiquer le degré d'instabilité des variations au cours de la période. Les marchés s'ajustent de façons diverses et à des vitesses différentes aux conditions de la demande et de l'offre ainsi qu'aux différences de politiques. Le degré d'instabilité des variations de prix peut être un signe, notamment, du degré de concurrence sur le marché.

Il importe de signaler quelques difficultés d'interprétation associées à l'utilisation des variations sur 12 mois. En premier lieu, l'événement causant la variation la plus récente a pu survenir le dernier mois, ou le même mois de l'année précédente. Par conséquent, les variations survenues au cours des mois de l'année 1985 doivent nécessairement tenir compte de facteurs ayant influencé les variations de prix survenues dans les mois correspondants de 1984, ce qui complique davantage le travail de déterminer la cause de la variation de prix. En deuxième lieu, une diminution de cette mesure ne signifie pas nécessairement que les prix absolus ont baissé; c'est plus souvent que le taux d'augmentation est inférieur. Ce n'est que lorsque, exceptionnellement, la variation sur 12 mois est négative que l'on peut conclure que le prix a baissé. Enfin, une tendance désigne une augmentation (tendance à la hausse) ou une diminution (tendance à la baisse) régulières dominantes du taux de variation des prix au cours d'une période donnée, habituellement plus d'une année. Il pourrait survenir un point tournant quand les variations sur 12 mois sont positives ou négatives. Il faut interpréter avec beaucoup de prudence les points tournant lorsque les variations sur 12 mois sont négatives.

B. LES TENDANCES DE L'INDICE D'ENSEMBLE

On utilise fréquemment l'indice d'ensemble des prix à la consommation (IPC) du Canada comme indicateur des variations du niveau général des prix ou du "taux d'inflation". Entre janvier 1985 et décembre 1989, l'indice d'ensemble a progressé à un taux annuel moyen de 4.3%. Au début de la période, les variations sur 12 mois ont été légèrement inférieures à 4.0% et elles ont oscillé légèrement autour de 4.0% jusqu'en 1989. En 1989, l'IPC a augmenté rapidement au cours du premier semestre de 1989 jusqu'à un sommet de 5.4% en juin et en juillet. Dans le second semestre, la tendance à la hausse a légèrement fléchi, se situant en moyenne autour de 5.2%. Les augmentations sur 12 mois de l'IPC sont passées de 3.7% au début de 1985 à un peu plus de 5.0% vers la fin de 1989.

C. MACRO-ECONOMIC CONDITIONS

The more recent behaviour of changes in the CPI appeared to follow less from changes in overall demand conditions. In 1989, the economy grew by 2.9% in real terms, the lowest annual rate of increase since the fall of 3.2% registered in the recession of 1982. Some part of the weakness in the latest year was evident in the relatively stable rate of increase in consumer expenditure (4.3% in 1988; 4.0% in 1989). Much of that weakness was apparent in the sharp drop in the rate of increase associated with durable goods, supported also by a fall, of a lesser order, in the rate of increase in non-durable goods. By contrast, the rates of increase in services and semi-durable goods were higher in 1989, compared to 1988. Additional evidence of the weakening state of consumer spending was seen in the decline in urban housing starts, which fell 9.5% in 1988 and 3.2% in 1989.

The rising cost of production appeared to have contributed more to explaining the latest increase in inflation. Part of these cost-push pressures came from higher input prices in the form of higher wages and increased prices for raw materials and energy. Wage settlements, exclusive of COLA provisions, have been rising steadily from 3.4% in 1988 to 5.2% in 1989. Between 1982 and 1987, the rate of increase in negotiated wages was below the rate of increase in the CPI. In 1988 and 1989, wage settlements exceeded changes in the inflation rate by a small margin.

The prices of raw materials were generally depressed in 1988 (down 5.2% on average), but was trending upwards in 1989 (up 3.8%). The latest performance was largely due to a sharp turn around in the prices of crude mineral oil, which rose an average 14.2% in 1989 compared to a fall of 21.8% in 1988.

The industrial sector of the economy was operating at an average 86% of capacity in 1988 and 1989. However, the construction industries appeared to be operating at near full capacity in the last two years. This was a major cause of upward pressure in the labour market. The unemployment rate had been falling steadily since its high in 1983 (11.8%). By 1989, it had reached 7.5%. Some have argued that at this rate of unemployment, a certain amount of upward pressure on inflation would become evident.

A slowing of the rate of increase in the money supply became apparent in early 1988. Growth in M2, one of the aggregates receiving special attention by the Bank of Canada (see "Technical note: The demand for M2 and M2+ in Canada", Bank of Canada Review, December 1989) rose by 7.6% in 1988, down from 10.1% in 1987. In 1989, this aggregate grew at an enhanced 13.1%. The same pattern of growth emerged with respect to M2+, the largest measure of monetary aggregates. Associated with the lower rate of increase in the money supply in 1988 was the latest round of rising interest rates. In December 1986, the Bank Rate was reading 8.66%. This had jumped to 12.46% in December 1989. Comparable interest rate increases were evident in prime business loans, mortgage loans and consumer loans.

These interest rate advances produced several effects on the CPI. As a rise in the cost of borrowing, it impacted heavily on the interest component of mortgage loans. The initial impact was also to add to the construction costs of new homes and to increase the costs of doing business generally. On the demand side, the higher rates added to the cost of consumer loans and acted as a constraint on consumer borrowing and spending.

Higher domestic interest rates also contributed indirectly to easing the upward pressure on domestic prices. The Canadian dollar appreciated in the international market, particularly with respect to the U.S. dollar. The difference between U.S. interest rates and domestic interest rates became wider. This

C. LES CONDITIONS MACRO-ÉCONOMIQUES

Les variations les plus récentes de l'IPC ont semblé moins liées à des mouvements de la demande générale. En 1989, l'économie a progressé à un rythme de 2.9% en termes réels, soit le taux d'augmentation annuel le plus faible depuis la baisse de 3.2% enregistrée lors de la récession de 1982. Le taux d'augmentation relativement stable des dépenses de consommation (4.3% en 1988; 4.0% en 1989) a reflété une partie de la faiblesse de la dernière année, faiblesse qu'a traduite principalement la chute du taux d'augmentation des biens durables, combinée à la baisse, moins importante toutefois, du taux d'augmentation lié aux biens non durables. Par contraste, les taux d'augmentation des catégories des services et des biens semi-durables ont été plus élevés en 1989 qu'en 1988. La diminution du nombre de mises en chantier en milieu urbain, en baisse de 9.5% en 1988 et de 3.2% en 1989, a été un autre signe du ralentissement des dépenses de consommation.

La hausse la plus récente de l'inflation semble imputable surtout à l'augmentation du coût de production. Une partie de ces pressions sur les coûts est due à des prix d'entrées plus élevés (salaires plus élevés, augmentation du prix des matières premières et de l'énergie). Les règlements salariaux, exclusion faite des indemnités de vie chère, ont enregistré des hausses régulières, de 3.4% en 1988 à 5.2% en 1989. Entre 1982 et 1987, le taux d'augmentation des salaires négociés a été inférieur au taux d'augmentation de l'IPC. En 1988 et en 1989, les règlements salariaux ont légèrement dépassé les variations du taux d'inflation.

Les prix des matières premières ont été généralement en baisse en 1988 (de 5.2% en moyenne), mais ont affiché une tendance à la hausse en 1989 (3.8%), grâce surtout à un renversement soudain des prix de l'huile minérale brute qui ont augmenté de 14.2% en moyenne en 1989 comparativement à une baisse de 21.8% en 1988.

En moyenne, le secteur industriel de l'économie a fonctionné à 86% de sa capacité en 1988 et en 1989. Cependant, les industries de la construction ont semblé fonctionner presque à plein rendement au cours des deux dernières années, ce qui a été une cause importante de pressions à la hausse sur le marché du travail. Le taux de chômage a diminué régulièrement depuis son point culminant en 1983 (11.8%). En 1989, il était descendu à 7.5%. Il a été dit qu'à un tel taux certaines pressions inflationnistes se manifesteraient.

On a observé un ralentissement du taux de croissance de la masse monétaire au début de 1988. La croissance de la M2, un des indices agrégés auquel la Banque du Canada accorde une attention particulière (voir "Note technique: La demande de M2 et de M2+ au Canada", Revue de la Banque du Canada, décembre 1989) a augmenté de 7.6% en 1988, comparativement à 10.1% en 1987. En 1989, cet indice est passé à 13.1%. La M2+, la mesure la plus importante des indices agrégés monétaires, a progressé de la même façon. La dernière flambée des taux d'intérêt a été associée au taux inférieur de croissance de la masse monétaire en 1988. Le taux d'escompte de la Banque du Canada, qui s'établissait à 8.66% en décembre 1986, atteignait 12.46% en décembre 1989. Les taux d'intérêt applicables aux prêts commerciaux, aux prêts hypothécaires et aux prêts à la consommation consentis par les banques à leurs meilleurs clients ont subi des augmentations comparables.

Ces hausses des taux d'intérêt ont agi de diverses façons sur l'IPC. Le coût plus élevé des emprunts a eu un effet marqué sur la part d'intérêts des prêts hypothécaires. Les hausses ont aussi eu pour effet premier d'accroître les coûts de construction des maisons neuves et, en général, ceux des opérations commerciales. Pour ce qui est de la demande, les taux élevés ont augmenté le coût des prêts à la consommation, ce qui a freiné en quelque sorte les emprunts et les dépenses de consommation.

Les taux d'intérêts élevés au Canada ont aussi contribué indirectement à atténuer les pressions inflationnistes qui s'exerçaient sur les prix au pays. Le dollar canadien s'est apprécié sur le marché international, surtout par rapport au dollar américain. L'écart entre les taux d'intérêt canadiens et américains s'est élargi, ce qui a produit une pression à la hausse sur le taux de change du dollar canadien.

put upward pressure on the exchange value of the Canadian dollar. In 1986, the exchange value of the Canadian dollar reached a low, averaging 72 cents U.S. By December 1989, this had risen to 86 cents U.S. The appreciating exchange rate has caused the price of imports to fall, thus contributing to the dampening of the rate of inflation. In addition, by making exports more expensive, the enhancement in the exchange rate may also contribute to a decline in domestic incomes, curbing spending and helping to hold down prices.

The effects of indirect taxes on the CPI have been quite noticeable in 1989. Perhaps the largest effect resulted from the rise in the Federal Sales Tax (from 12.0% to 13.5%) in June. It was responsible for pushing up the CPI by nearly 0.5%. The immediate effect was most pronounced in the prices of new automobiles, but the lagged impact was apparent for several months afterwards.

Higher Federal taxes on gasoline and tobacco products in late April also added to upward price pressures. Provinces also contributed to the price increases on gasoline and tobacco products during the latest year. In most instances, gasoline taxes were adjusted automatically with price changes. However, provincial tax increases on tobacco products were quite numerous. Advances in the prices of alcoholic beverages due to increases in provincial indirect taxes have almost disappeared in recent years. Several provinces, by virtue of the monopoly exercised in the distribution of alcoholic products, appear to raise targeted revenue by increasing mark-ups on such products.

D. GOODS AND SERVICES

These two components of the CPI show that price change in Services has been the more dominant force in explaining the overall rate of inflation in the period (see Figure 1). The Services index advanced at an average annual rate of 4.8%, while the Goods index climbed by a slower 3.8%.

A closer look at the Goods index revealed that prices of non-durable goods behaved quite differently from those of durable and semi-durable goods (see Figure 2). The latter two indexes registered declines

En 1986, le cours du dollar canadien atteignait son plus bas niveau, soit \$0.72 US en moyenne. En décembre 1989, il avait augmenté à \$0.86 US. La montée du taux de change a fait baisser le prix des importations et a ainsi aidé à contenir le taux d'inflation. De plus, en augmentant le prix des produits exportés, l'amélioration du taux de change peut aussi contribuer à diminuer les revenus canadiens, freinant ainsi les dépenses et aidant à maintenir les prix à un bas niveau.

Les répercussions des taxes indirectes sur l'IPC ont été très évidentes en 1989. Il est probable que l'effet le plus important soit imputable à la hausse de la taxe de vente fédérale (de 12.0% à 13.5%) en juin, ce qui a ajouté près de 0.5% à l'IPC. C'est sur le prix des automobiles neuves que l'effet immédiat a été le plus marqué, mais on en a observé l'effet avec retards pendant plusieurs mois par la suite.

L'augmentation des taxes fédérales sur l'essence et sur les produits du tabac, fin avril, a aussi ajouté aux pressions à la hausse sur les prix. Les provinces ont aussi contribué aux augmentations du prix de l'essence et des produits du tabac au cours de la dernière année. En général, les taxes sur l'essence ont été rajustées automatiquement, à mesure que les prix variaient. Cependant, on a imposé de nombreuses augmentations de taxes provinciales sur les produits du tabac. Les hausses de prix des boissons alcoolisées, imputables à des hausses de taxes provinciales indirectes, ont quasi disparu ces dernières années. Plusieurs provinces, qui exercent un monopole sur la distribution des produits alcoolisés, semblent augmenter les recettes qu'elles visent à obtenir en majorant les prix de ces produits.

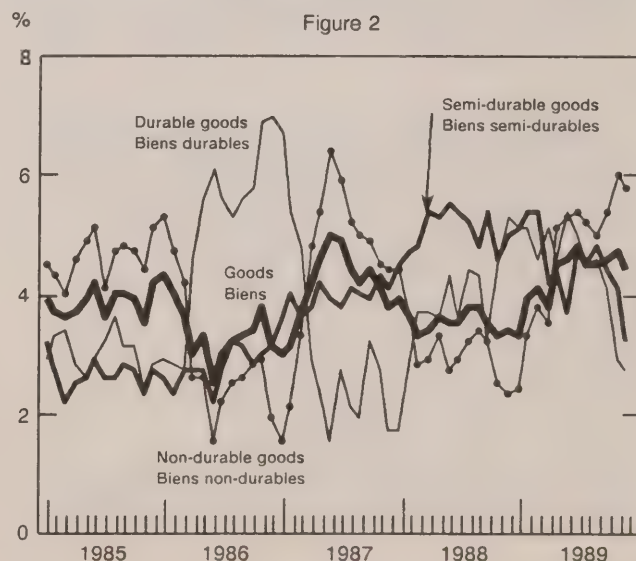

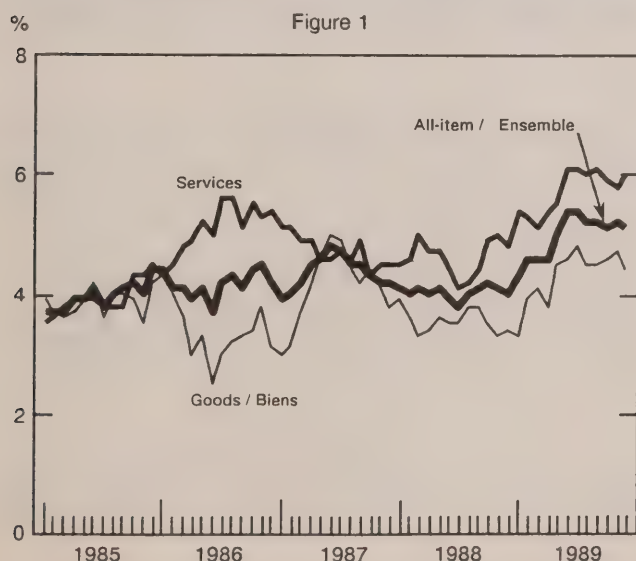

D. LES BIENS ET LES SERVICES

L'examen de ces deux composantes de l'IPC révèle que ce sont les variations de prix des services qui sont la cause dominante du taux général d'inflation au cours de la période examinée (voir la figure 1). L'indice des services a progressé à un taux annuel moyen de 4.8%, contre 3.8% pour l'indice des biens.

Une étude plus approfondie de l'indice des biens a révélé que les prix des biens non durables se sont comportés bien différemment de ceux des biens durables ou semi-durables (voir la figure 2). Les indices de ces deux types de biens ont ac-

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

in their 12-month changes in 1989. By contrast, 12-month price changes increased for the former during the same time.

E. ENERGY

Energy price increases led the overall rate of inflation in the latter years of the 70's and the early 80's. In more recent years, some of the deceleration in the overall rate of price increase has been due to the behaviour of the Energy index. Twelve month changes in this index remained negative for most of 1986, and again in the latter part of 1988 and early 1989 (see Figure 3). Much of this was attributable to the behaviour of price changes for gasoline, fuel oil and piped gas (Figure 4). In 1989, however, the Energy index rose rapidly moving from a drop of 2.7% in January to a rise of 7.3% in December for an average of 3.5%. By contrast, the All-items excluding Energy index rose almost continuously through 1988 to reach a peak of 5.5% in the summer of 1989, from which point it has dropped to 5.0% in December 1989.

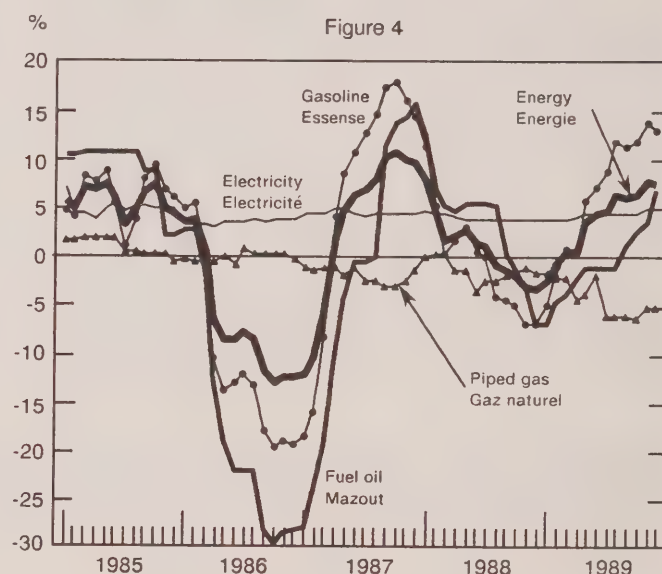

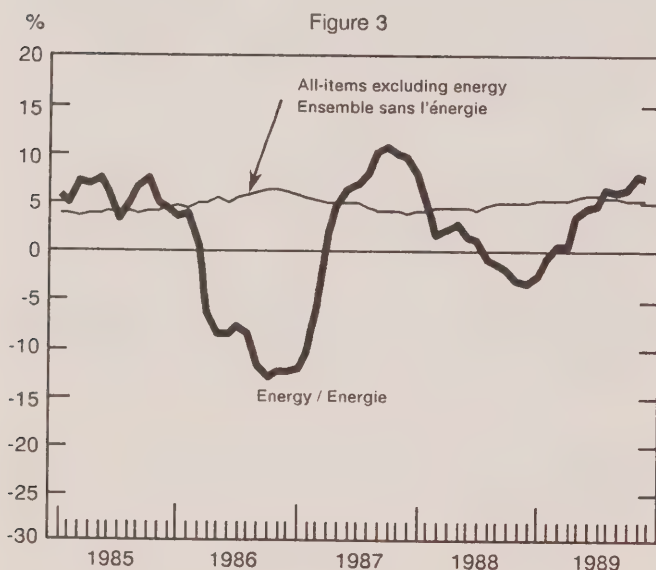

cusé des baisses de leurs variations sur 12 mois en 1989. Par contraste, les variations de prix sur 12 mois pour les biens non durables ont augmenté durant la même période.

E. L'ÉNERGIE

Les augmentations du prix de l'énergie ont mené le taux global d'inflation à la fin des années 70 et au début des années 1980. Ces dernières années, les mouvements de l'indice de l'énergie expliquent dans une certaine mesure le ralentissement du taux général d'augmentation des prix. Pour ce qui est de cet indice, les variations sur 12 mois sont demeurées négatives pendant presque toute l'année 1986, de même qu'à la fin de 1988 et au début de 1989 (voir la figure 3), situation attribuable en grande partie aux variations des prix de l'essence, du mazout et du gaz canalisé (figure 4). En 1989 cependant, l'indice de l'énergie est passé rapidement d'une baisse de 2.7% en janvier à un gain de 7.3% en décembre (moyenne annuelle de 3.5%). Par contraste, l'indice d'ensemble, indice de l'énergie non compris, a augmenté de façon presque constante pendant toute l'année 1988 jusqu'à atteindre un sommet de 5.5% à l'été 1989, pour diminuer ensuite à 5.0% en décembre 1989.

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

The low overall rate of annual increases associated with the prices of gasoline and fuel oil was traceable, in the main, to an excess supply of crude oil and to the unleashing of competitive prices following the de-regulation of the petroleum industry. In a similar vein, rising crude oil prices in 1989 have been forcing up prices for gasoline and fuel oil. The price of piped gas has dropped quite noticeably in the period. Electricity prices, on the other hand, continue to exert a fair proportion of the upward pressure on the Energy index. Over the period as a whole, electricity prices have risen at an average annual rate of 4.0% and gasoline by 1.3%. By contrast, prices of piped gas and fuel oil fell 1.6% and 2.0% respectively.

F. TRENDS IN MAJOR COMPONENT INDEXES

We have already noted that over the period as a whole, the All-items index was increasing at an average annual rate of 4.3%. Increases in the major com-

Le faible taux général des augmentations annuelles liées aux prix de l'essence et du mazout était principalement imputable à une offre excédentaire de pétrole brut et à la concurrence de prix qui s'est installée suite à la déréglementation de l'industrie pétrolière. De la même façon, la hausse du prix du pétrole brut a fait monter les prix de l'essence et du mazout en 1989. Durant le période examinée, le prix du gaz canalisé a baissé sensiblement. Le prix de l'électricité, en revanche, continue d'exercer une bonne partie des pressions à la hausse sur l'indice de l'énergie. Durant toute la période, les prix de de l'électricité et de l'essence ont augmenté à des taux annuels moyens de 4.0% et de 1.3% respectivement, tandis que ceux du gaz canalisé et du mazout ont baissé (1.6% et 2.0%).

F. LES TENDANCES DES INDICES DES PRINCIPALES COMPOSANTES

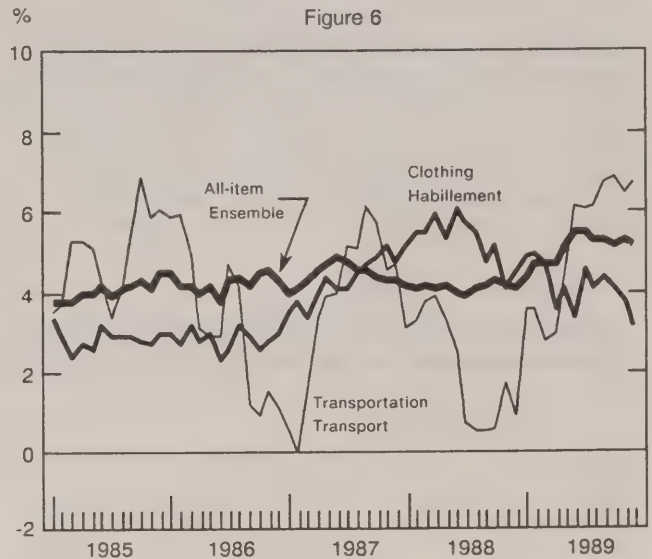

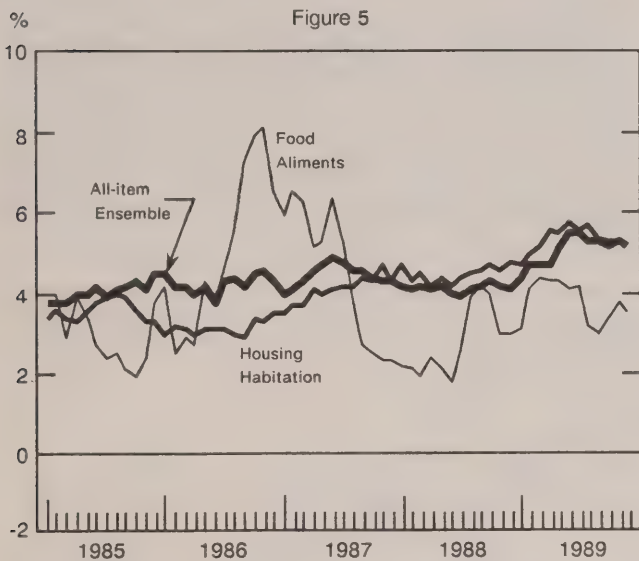

Nous avons déjà mentionné qu'au cours de la période toute entière, l'indice d'ensemble a augmenté à un taux annuel moyen de 4.3%. Les gains des indices des principales composantes

ponent indexes varied from a low of 3.7% for Food to 9.0% for Tobacco Products and Alcoholic Beverages. In addition to the latter index, the Recreation, Reading and Education index (4.8%) advanced by an above average rate. The indexes for Food (3.7%), Housing (4.0%), Clothing (3.8%), and Transportation (3.8%) all increased at rates that were lower than that of the All-items index. The average annual rate of increase in the Health and Personal Care index co-incided with that of the All-items index.

ont varié de 3.7% pour les aliments à 9.0% pour les produits du tabac et les boissons alcoolisées. Outre ce dernier indice, celui des loisirs, de la lecture et de la formation a connu une augmentation (4.8%) supérieure à la moyenne. Les hausses des indices des aliments (3.7%), de l'habitation (4.0%), de l'habillement (3.8%) et des transports (3.8%) ont toutes été inférieures à celle de l'indice d'ensemble. Le taux d'augmentation annuel moyen de l'indice de la santé et des soins personnels a coïncidé avec celui de l'indice d'ensemble.

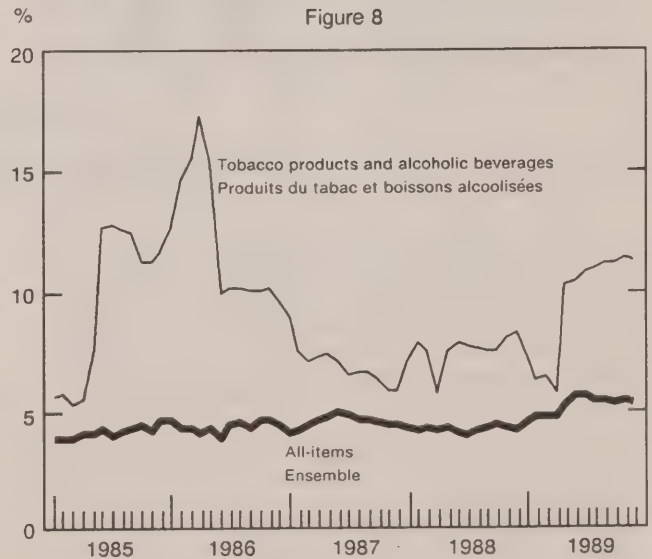

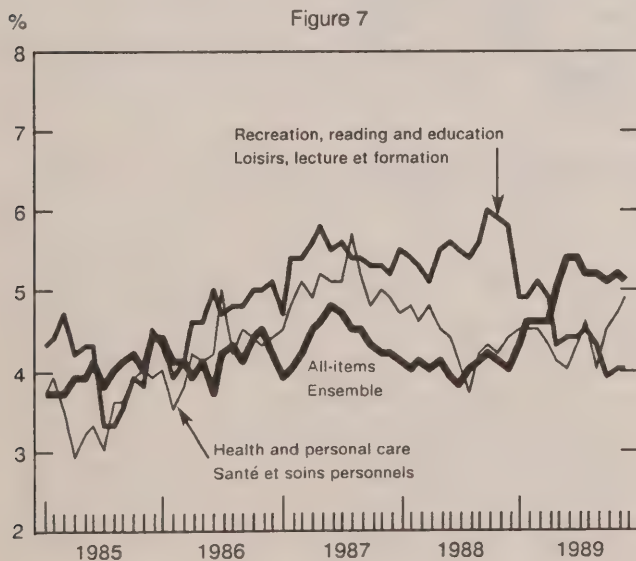

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Some extent of the volatility in price change behaviour associated with the major component indexes may be seen in Figures 5, 6, 7 and 8. The measured deviations confirmed that most of the volatility seen in the movements of the All-items index was traceable to the behaviour of the indexes for Tobacco Products and Alcoholic Beverages, Transportation, Food, and Clothing. In 1989, trend differences were also evident. Transportation, Health and Personal Care, and Tobacco Products and Alcoholic Beverages were on a rising trend. Movements in Clothing and Recreation, Reading and Education were tracing out a falling trend. Increases in Food were somewhat stable and those for Housing appeared to be weakening slightly.

G. TRENDS IN SMALLER COMPONENTS OF THE CPI

1. Food

The Food Purchased from Stores index increased at a much lower overall average annual rate (3.4%) than was found in the index for Food Purchased from Restaurants (4.6%). The former depicted a much larger degree of volatility than the other (see Figure 9). The major contributors to this larger volatility were found in the price change behaviour of fresh vegetables, fresh fruit, meat products (notably that for pork), coffee, tea, fats and oils, sugar and carbonated beverages.

On peut remarquer aux figures 5, 6, 7 et 8, une certaine mesure de l'instabilité des variations de prix liées aux indices des principales composantes. Les écarts mesurés ont confirmé que l'instabilité des mouvements de l'indice d'ensemble était principalement attribuable au comportement des indices des produits du tabac et des boissons alcoolisées, des transports, des aliments et de l'habillement. En 1989, on a aussi observé des différences de tendances. Les indices des transports, de la santé et des soins personnels ainsi que des produits du tabac et des boissons alcoolisées ont affiché une tendance à la hausse. Les mouvements des indices de l'habillement et des loisirs, de la lecture et de la formation ont amorcé une courbe descendante. Les augmentations de l'indice des aliments ont été relativement constantes et celles de l'indice de l'habitation ont semblé faiblir légèrement.

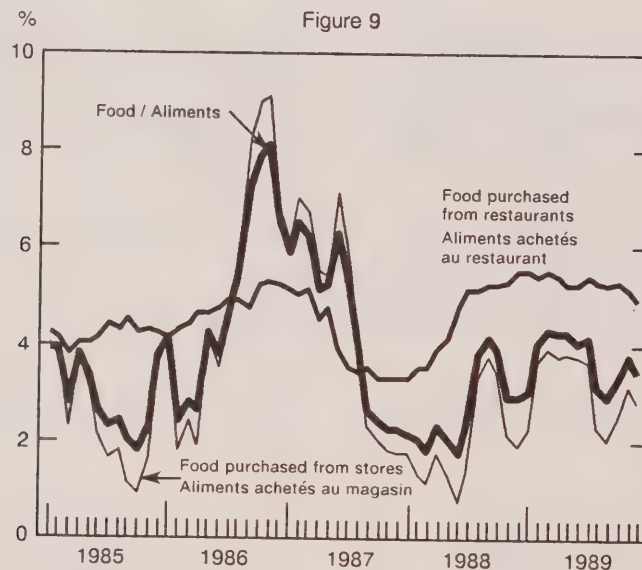

G. LES TENDANCES DES SOUS-GROUPES DE L'IPC

1. Aliments

On a relevé un taux d'augmentation annuel moyen beaucoup plus faible pour l'indice des aliments achetés au magasin (3.4%) que pour celui des aliments achetés au restaurant (4.6%). Toutefois, le premier indice cité a présenté un degré d'instabilité bien supérieur au second (voir la figure 9). Les variations de prix des produits suivants ont été les principaux facteurs de cette instabilité: légumes frais et fruits frais, viandes (notamment le porc), café, thé, huiles et corps gras, sucre et boissons gazeuses.

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Prices of fresh produce rose following drought conditions in 1988. However, growing and harvesting conditions were quite favourable in 1989, leading to noticeable price weakening. The large variability found in the poultry market and, to some extent in the pork market, appeared to emerge from changing demand conditions. The markets for sugar, coffee, tea, and fats and oils resulted in depressed prices, mainly because of excess supplies. The significant fluctuations found in the prices of carbonated beverages resulted from frequent promotions. In 1989, rising trends in price changes were most evident in most of the meat products, in coffee, tea, and in frozen vegetables. Falling trends were posted by fish, eggs, pasta products, fruit juices, and fats and oils.

Le prix des fruits et légumes frais a augmenté après la sécheresse de 1988. Cependant, les conditions favorables à la culture et à la récolte ont entraîné un affaiblissement notable des prix en 1989. La grande variabilité que l'on a relevé dans le marché des volailles et, dans une certaine mesure, dans celui du porc a semblé découler de fluctuations de la demande. Les marchés du sucre, du café, du thé et des huiles et des corps gras ont accusé des prix à la baisse, surtout à cause de surplus. Les variations importantes des prix des boissons gazeuses ont été le résultat de fréquentes campagnes de promotion. En 1989, on a constaté que les tendances à la hausse des variations de prix étaient les plus évidentes dans les catégories suivantes: la plupart des viandes, le café, le thé et les légumes congelés. Le poisson, les oeufs, les pâtes alimentaires, les jus de fruits et les huiles et corps gras ont par contre présenté des tendances à la baisse.

2. Housing

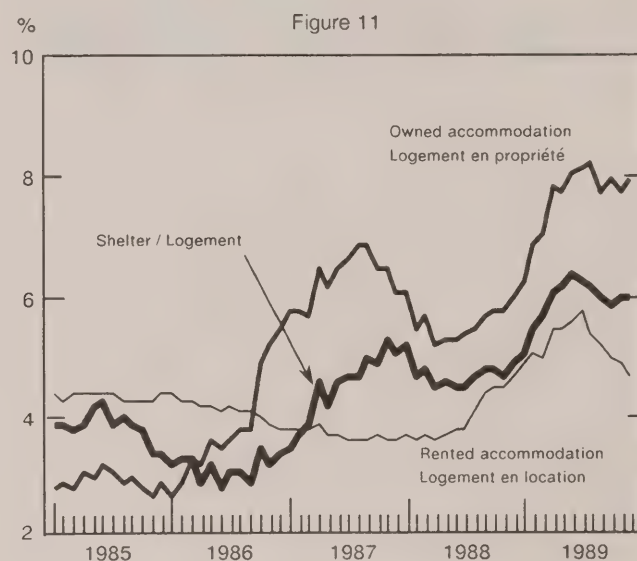

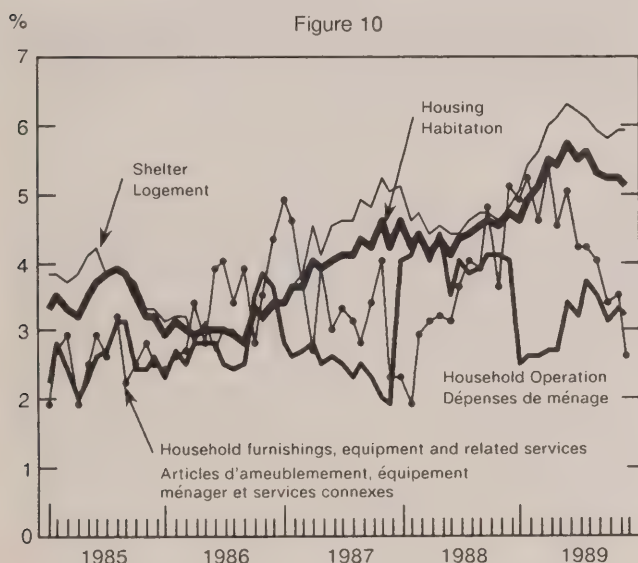

The Shelter component had an annual average increase of 4.3%, while Household Operations (3.0%) and Household Furnishings and Equipment (3.4%) were considerably lower (see Figures 10 and 11). The greater rates of increase in Shelter resulted from high annual rates of change associated with property taxes, insurance premiums, the prices of new houses, water rates and hotel/motel accommodation charges. In the latest year, changes in mortgage interest costs also had a major impact in determining the course of the Shelter index. Higher new house prices and mortgage interest rates lead to advances in the rates of increase for the replacement cost and mortgage interest cost indexes of the Shelter component. In March 1988, the typical mortgage rate associated with chartered banks was averaging 9.75%; by March 1989 it had climbed to 13.5% and from June 1989 to the end of the year, it remained at 12.75%. The higher interest rate charges also appeared to depress prices of household furnishings and equipment by acting as a constraint on demand.

2. Habitation

La composante du logement a affiché une augmentation annuelle moyenne de 4.3% tandis que l'indice des dépenses de ménage et celui des articles d'ameublement et de l'équipement ménager a présenté des taux sensiblement inférieurs (3.0%) et (3.4%) respectivement; figures 10 et 11). Ce sont les taux de variation annuels élevés des taxes foncières, des primes d'assurance, du prix des maisons neuves, des tarifs de l'eau et des prix des chambres d'hôtel/motel qui ont entraîné des taux d'augmentation plus élevés de l'indice du logement. Au cours de la dernière année, les variations des coûts d'intérêt hypothécaire ont aussi joué un rôle important dans les mouvements de l'indice du logement. La hausse du prix des maisons neuves et des taux d'intérêt hypothécaire a fait progresser les taux d'augmentation des indices des coûts de remplacement et d'intérêt hypothécaire de la composante du logement. En mars 1988 le taux hypothécaire caractéristique des banques à charte était de 9.75% en moyenne; en mars 1989, il avait atteint 13.5% et de juin 1989 jusqu'à la fin de l'année, il est demeuré à 12.75%. Les taux d'intérêt supérieurs ont aussi contribué, semble-t-il, à affaiblir les prix des articles d'ameublement et de l'équipement ménager en limitant la demande.

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Some weakening of price increases in Housing have already been alluded to under the Energy component. Changes in piped gas rates, in particular, were negative for a large part of the period and continued to remain so in the most recent years. Also, telephone charges have indicated an exceedingly small and sometimes negative rate of price change. This was primarily due to lower long-distance charges.

Nous avons déjà fait allusion à un certain ralentissement des augmentations de prix des composantes de l'habitation lorsque nous avons analysé l'indice de l'énergie. Les variations des tarifs du gaz canalisé, en particulier, ont été négatives la plupart du temps et n'ont pas changé. De même, les dépenses liées au service téléphonique ont présenté un taux de variation de prix extrêmement faible et parfois négatif, principalement à cause de frais d'interurbains moins élevés.

3. Clothing

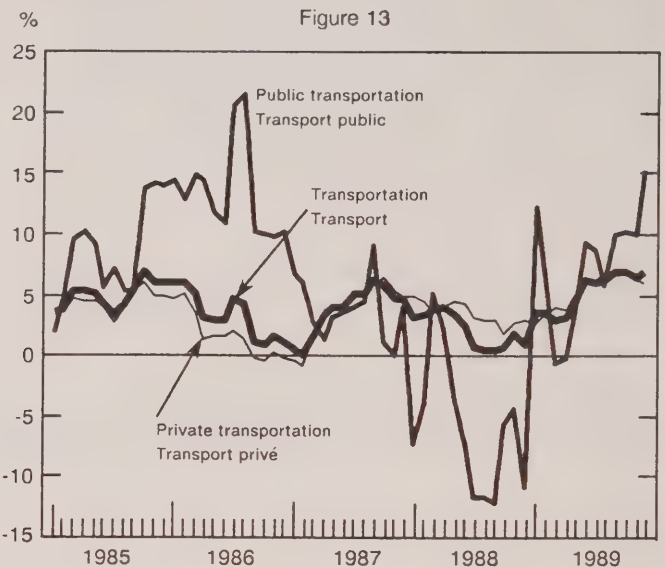

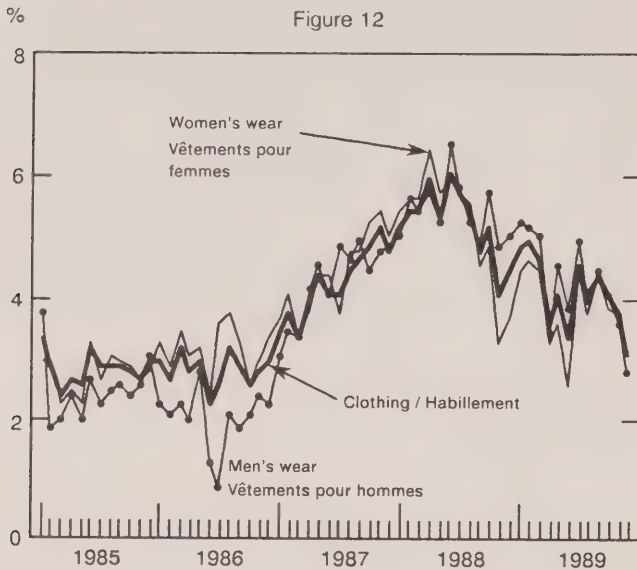

Trends in the price movements of Clothing were generally weak. This weakness was distributed across the two larger categories, Women's Wear and Men's Wear (Figure 12). Changes in the Clothing Materials index were also predominantly depressed. However, price movements associated with laundering and dry-cleaning services were rising at a relatively quick annual rate, although, by 1989, the trends were falling as well.

3. Habillement

Pour ce qui est des mouvements de prix associés à l'indice de l'habillement, les tendances ont été généralement faibles. Cette situation a touché les deux catégories principales de l'indice, soit les vêtements pour femmes et les vêtements pour hommes (figure 12). Les variations de l'indice du tissu pour vêtements ont été principalement faibles, elles aussi. Cependant, les mouvements de prix des services de buanderie et de nettoyage à sec ont affiché un taux d'augmentation annuel relativement rapide; en 1989 toutefois, les tendances ont aussi accusé une baisse.

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

4. Transportation

The average annual rise in the Public Transportation index (5.4%) was significantly above that of the Private Transportation index (3.6%), (Figure 13). Some components of Private Transportation, notably those relating to the purchase or rental of an automobile, parking rates, driving lesson charges and insurance premiums scored major price change gains in the period. In the Public Transportation group, annual rates of increase in passenger fares relating to travel within the city or travel between cities, the latter by air and rail, were relatively high. The annual rise in gasoline prices was a moderate 1.3%, but this resulted from excessively large fluctuations. By contrast, the airfares index rose by 5.7% annually over the period, but it also registered considerable volatility. In both cases, the volatility was partly the consequence of removing regulatory constraints on the industries in question.

4. Transports

L'augmentation annuelle moyenne de l'indice du transport public (5.4%) a dépassé nettement celle de l'indice du transport privé (3.6%; figure 13). Certaines composantes du groupe du transport privé ont enregistré des gains importants pendant la période examinée, notamment celles concernant l'achat ou la location d'une automobile, les frais de stationnement, le prix des cours de conduite et les primes d'assurance. Quant au groupe du transport public, les taux annuels d'augmentation des tarifs exigés pour les déplacements urbains ou interurbains (par avion ou en train, dans ce dernier cas) ont été relativement élevés. Le prix de l'essence a subi une hausse modérée de 1.3%, mais cela a été le résultat de fluctuations extrêmement importantes. Par comparaison, l'indice du prix de billets d'avion a augmenté de 5.7% par année pendant la période, mais il a aussi manifesté une grande instabilité. Dans les deux cas, l'instabilité a été en partie attribuable à la déréglementation des industries en question.

5. Health and Personal Care

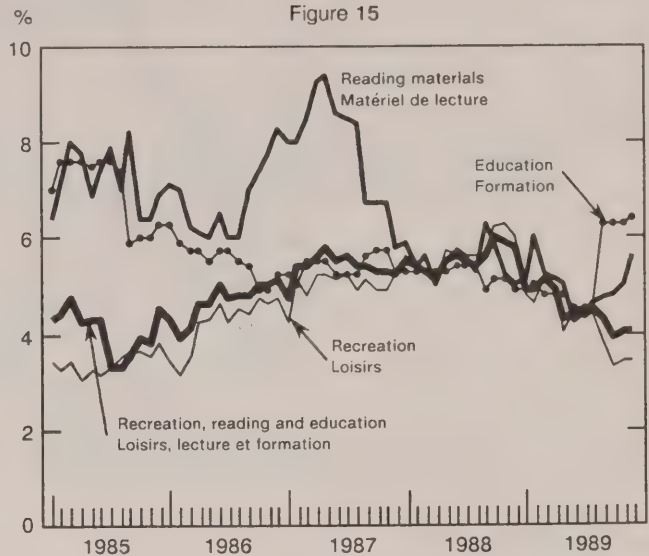

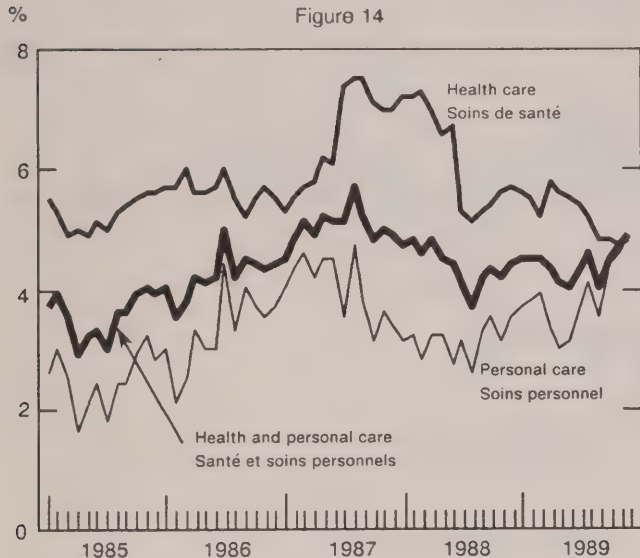

The Health Care index posted a higher average 12-month rise (5.8%) compared to the Personal Care index (3.3%) (see Figure 14). In the first index, the rapid rise of pharmaceutical product prices (8.2%) was the dominant factor. In the second index, some noteworthy pressures emerged from the 4.8% average rise associated with hair-grooming services. Prices of oral hygiene products (toothbrushes, toothpaste and mouthwash) indicated a high degree of volatility. By 1989, rising trends were underscored by the price changes of toilet preparations, oral hygiene products, toilet soap and disposable diapers. Falling trends or downturns were reflected by pharmaceutical products and dental care services.

5. Santé et soins personnels

On a constaté que l'indice des soins de santé a connu une hausse moyenne sur 12 mois (5.8%) supérieure à celle de l'indice des soins personnels (3.3%) (voir la figure 14). Les hausses importantes du prix des produits pharmaceutiques (8.2%) ont été responsables en grande partie des gains du premier indice. Quant au second indice, l'augmentation moyenne de 4.8% du coût des services de coiffure a exercé des pressions notables. Les prix des produits d'hygiène buccale (brosses à dents, dentifrice et rince-bouche) ont été très instables. En 1989, ce sont les variations de prix des produits de toilette, des produits d'hygiène buccale, du savon de toilette et des couches jetables qui ont été les principaux facteurs des tendances à la hausse. Par ailleurs, on a constaté des tendances à la baisse ou des diminutions dans les catégories des produits pharmaceutiques et des services de soins dentaires.

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

6. Recreation, Reading and Education

During the period under study, average annual increases in the Education (5.7%) and the Reading Materials (6.5%) indexes were higher than those of the Recreation index (4.5%) (Figure 15). Within the Recreation index, however, relatively sharp average rates were registered for Spectator Entertainment services, ranging from 5.0% for Staged Performances to 7.7% for Cablevision services. Annual increases in travel tour quotations were also rapid (5.4%) in addition to being the most volatile element of the Recreation component. In the Reading Materials index, magazine prices had moved up more sharply than those of newspapers. In 1989, increases in the Recreation index were falling, while those relating to Education were rising. The Reading Materials index was pointing to an upturn in the latest year.

7. Tobacco Products and Alcoholic Beverages

It is well known that indirect taxes, Federal and Provincial, added on to the prices of tobacco and alcoholic products, have tended to push the increases in the overall major component indexes at rates that were significantly above those applicable to the rest of the consumer market. In more recent years, however, the average annual rate of increase associated with the Tobacco Products index (13.9%) is more than twice as large as that pertaining to the Alcoholic Beverages index (6.2%) (see Figure 16). Within the Alcoholic Beverages index, however, the average annual rate associated with the prices of beer was significantly higher than the rates for wine and liquor. In 1989, price changes for cigarettes were on the upswing, as well as those for liquor served in licensed premises or purchased from stores. The index for beer purchased from stores uniquely indicated a falling trend.

6. Loisirs, lecture et formation

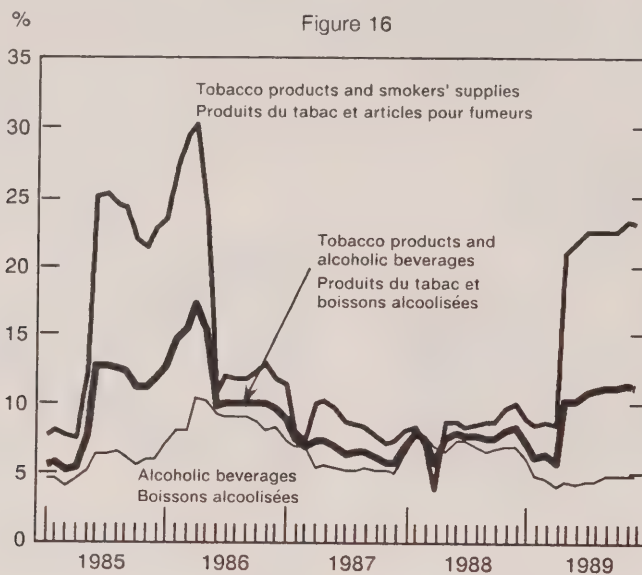

Au cours de la période examinée, les augmentations annuelles moyennes des indices de la formation (5.7%) et de la lecture (6.5%) ont été supérieures à celle de l'indice des loisirs (4.5%; figure 15). Dans ce dernier, cas cependant, on a relevé des taux moyens relativement marqués pour les services de divertissement, allant de 5.0% pour les spectacles sur scène à 7.7 % pour les services de télédistribution. Les augmentations annuelles des prix des voyages organisés ont aussi été considérables (5.4%) en plus d'être l'élément le plus instable de l'indice des loisirs. Quant à l'indice de la lecture, le prix des revues a augmenté plus nettement que celui des journaux. En 1989, le taux d'augmentation de l'indice des loisirs était en baisse tandis que celui de l'indice de la formation progressait. L'indice de la lecture avait pris une direction positive au cours de la dernière année.

7. Produits du tabac et boissons alcoolisées

C'est un fait connu que les taxes indirectes, tant fédérales que provinciales, ajoutées aux prix des produits du tabac et des boissons alcoolisées, ont eu tendance à faire passer les augmentations de l'ensemble des indices des composantes principales à des taux considérablement supérieurs à ceux qui s'appliquaient au reste du marché de consommation. Ces dernières années, cependant, le taux d'augmentation annuel moyen de l'indice des produits du tabac (13.9%) est plus du double de celui de l'indice des boissons alcoolisées (6.2%; figure 16). Dans cette dernière catégorie, cependant, le taux d'augmentation annuel moyen du prix de la bière a été considérablement plus élevé que les taux relatifs aux vins et aux spiritueux. En 1989, les variations de prix des cigarettes étaient à la hausse de même que celles des spiritueux servis dans les débits détenteurs de permis ou achetés au magasin. L'indice de la bière achetée au magasin uniquement a indiqué une tendance à la baisse.

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

H. TRENDS IN CITY CPI'S

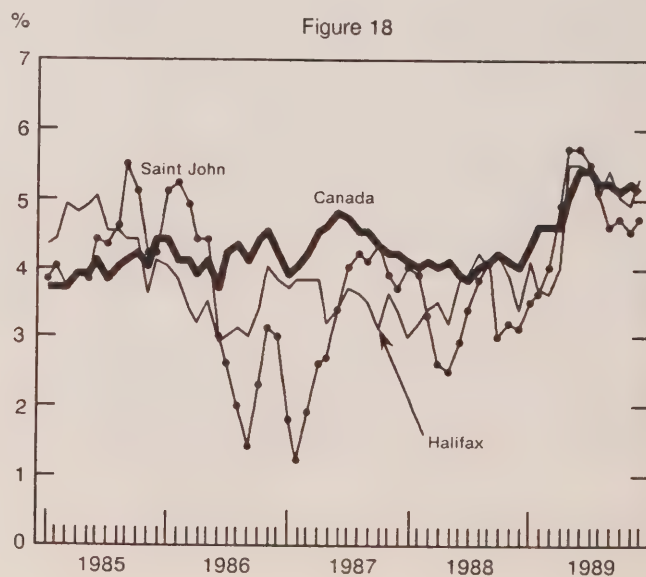

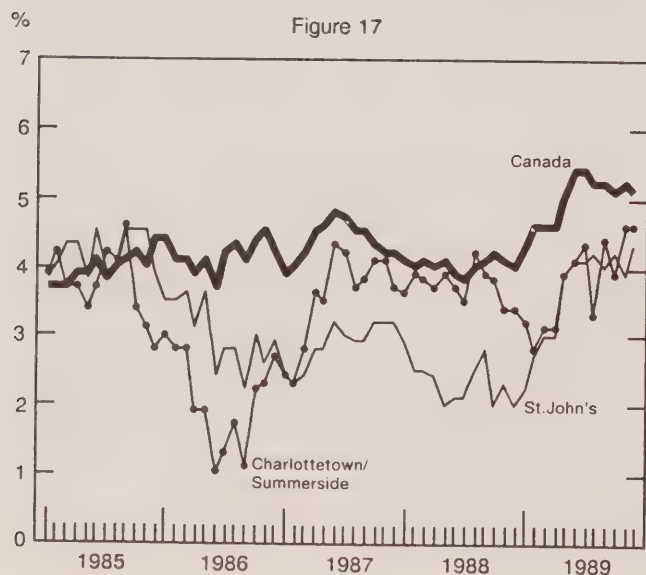

Movements in the All-items indexes for cities indicated that 10 cities were on a rising trend and five had started to slow down in 1989. In the remaining city of Winnipeg, the signals were unclear (see Figures 17 through 24). Toronto lead the rest of the country as the city with the fastest rate of overall price increases all through 1987, the latter half of 1988 and most of 1989. For the first half of 1988, the leadership was taken over by Saskatoon. In December 1989, Calgary displaced Toronto.

H. TENDANCES DES IPC DES VILLES

On a constaté que les mouvements des indices d'ensemble des villes étaient en hausse dans 10 villes et avaient amorcé un ralentissement dans cinq autres villes en 1989. Quant à la dernière ville, Winnipeg, on ne peut tirer de conclusion claire et nette (voir les figures 17 à 24). Toronto est la ville où le taux des augmentations globales de prix a été le plus rapide pendant toute l'année 1987, le deuxième semestre de 1988 et presque toute l'année 1989. Saskatoon a pris la relève au cours du premier semestre de 1988 et, en décembre 1989, Calgary a remplacé Toronto.

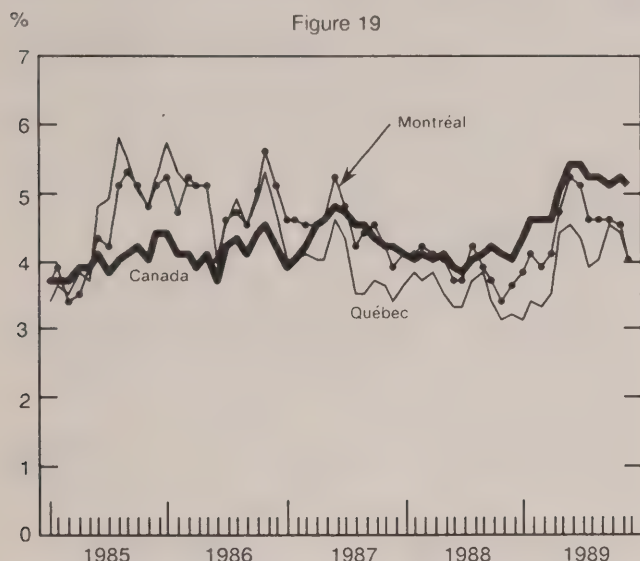

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

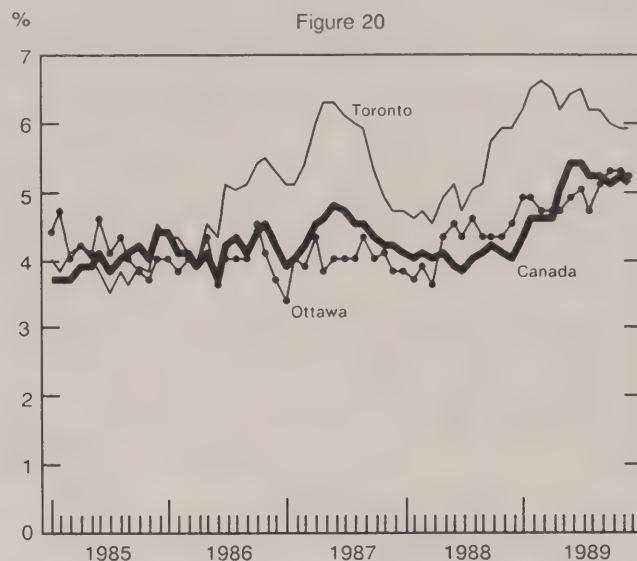

Percentage Change in the CPI from the Same month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

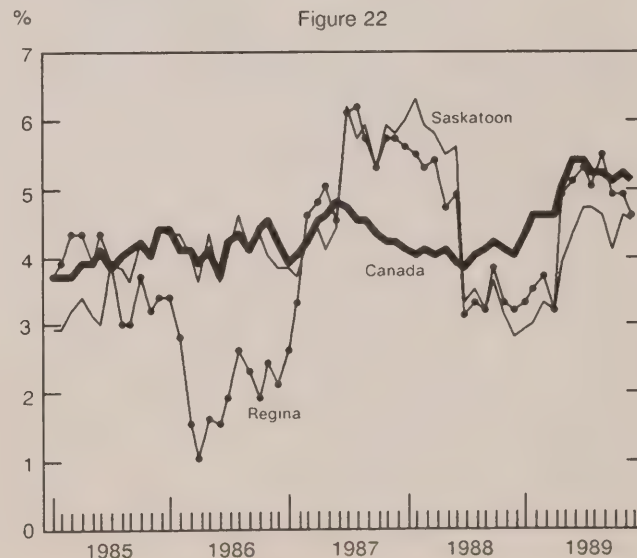

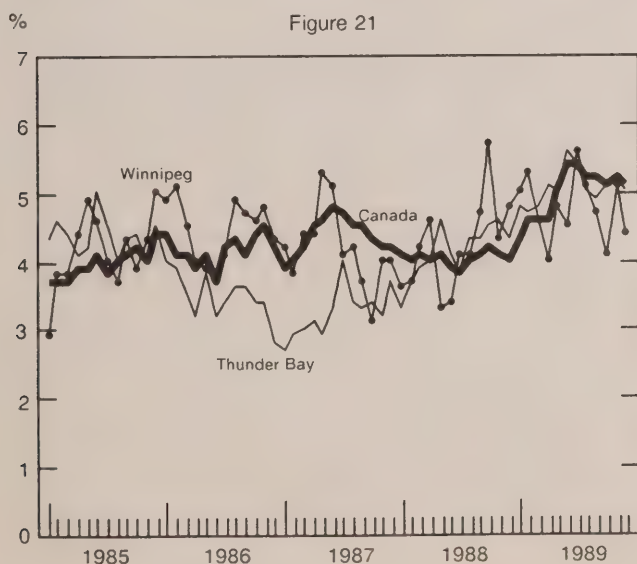

In terms of the latest trends, leadership in inflation had clearly shifted away from the Centre of the country to the West. The All-items index for the two largest cities in Central Canada (Toronto and Montréal) indicated subsiding rates of increases. Upward trends in price increases had become evident mostly in the cities of Alberta and British Columbia and to some extent in Saskatoon.

Pour ce qui est des tendances les plus récentes, le mouvement inflationniste s'est nettement déplacé du centre du pays vers l'Ouest. L'indice d'ensemble des deux plus grandes villes du centre du Canada (Toronto et Montréal) a révélé une baisse des taux d'augmentation. Des tendances à la hausse au niveau des augmentations de prix étaient devenues évidentes surtout dans les villes de l'Alberta et de la Colombie-Britannique, et dans une moindre mesure, à Saskatoon.

Percentage Change in the CPI from the Same month of the Previous Year

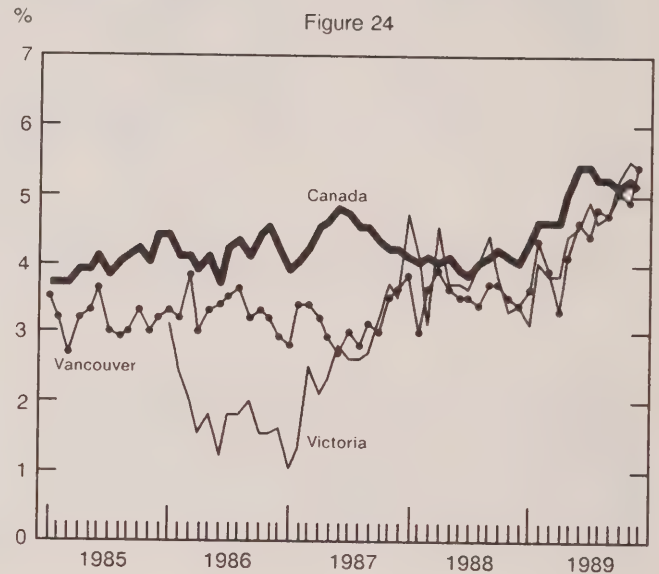

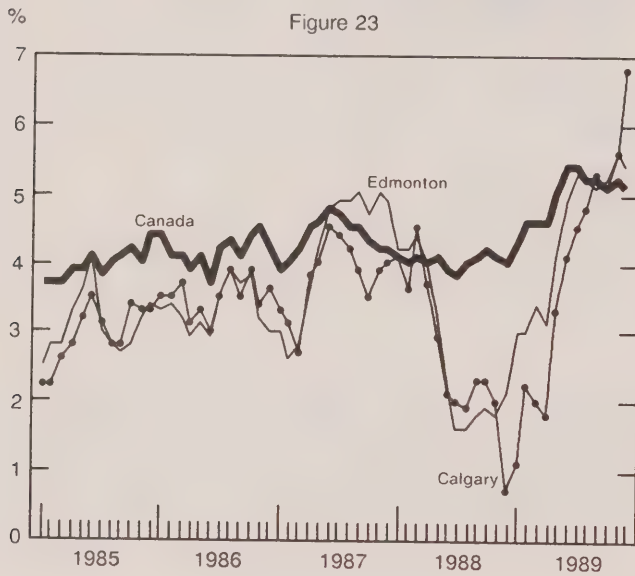

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Much of the early signals in the differences in these overall trends in price movements were associated with differences in price changes for Food and Housing. Rising trends in Food prices were very evident in the cities west of and including Saskatoon. Increases in the Housing index were on the uptrend as well in the cities of Calgary, Edmonton, Vancouver and Victoria.

La plupart des premiers signes de changement de ces tendances générales des mouvements de prix étaient associés à des différences dans les variations de prix des indices des aliments et de l'habitation. On a observé des tendances à la hausse très évidentes des prix des aliments dans les villes à l'ouest de Saskatoon inclusivement. Les augmentations de l'indice de l'habitation étaient aussi à la hausse à Calgary, Edmonton, Vancouver et Victoria.

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

| Major components | Weights 1982 | Weights 1986 |
|--|----------------------|----------------------|
| Composantes principales | Pondérations 1982 | Pondérations 1982 |
| All-items - Ensemble | 100.00(1) | 100.00(1) |
| Food - Aliments | 20.02 | 18.05 |
| Housing - Habitation | 38.14 | 36.32 |
| Clothing - Habillement | 8.37 | 8.69 |
| Transportation - Transports | 15.75 | 18.29 |
| Health and personal care - Santé et soins personnels | 4.02 | 4.20 |
| Recreation, reading and education - Loisirs, lecture et formation | 8.25 | 8.84 |
| Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées | 5.45 | 5.60 |

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves com-

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux

pounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be

de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en

used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3 \text{ cents}$). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut; ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

| Principal commodity group | Number of items priced (if available) |
|---------------------------------------|---------------------------------------|
| Food at home | 104 |
| Meals away from home | 9 |
| Household maintenance and services | 11 |
| Household supplies | 8 |
| Communications | 3 |
| Domestic help (depending on location) | 2-8 |

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

| Groupe principal de produits | Nombre d'articles dont le prix est relevé (lorsque disponibles) |
|--|---|
| Aliments consommés à la maison | 104 |
| Repas pris à l'extérieur | 9 |
| Entretien et services ménagers | 11 |
| Fournitures ménagères | 8 |
| Communication | 3 |
| Aide-domestique (dépendant de l'endroit) | 2-8 |

| | | | |
|---|---------------------------------------|---|---|
| Clothing and home furnishings | 22 | Habillement et ameublement | 22 |
| Transportation and automobile operation | 22 | Transports et utilisation de l'automobile | 22 |
| Principal commodity group | Number of items priced (if available) | Groupe principal de produits | Nombre d'articles dont le prix est relevé (lorsque disponibles) |
| Health and personal care | 25 | Santé et soins personnels | 25 |
| Reading and recreation | 13 | Lecture et loisirs | 13 |
| Tobacco and alcohol | 12 | Tabacs et boissons alcoolisées | 12 |

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

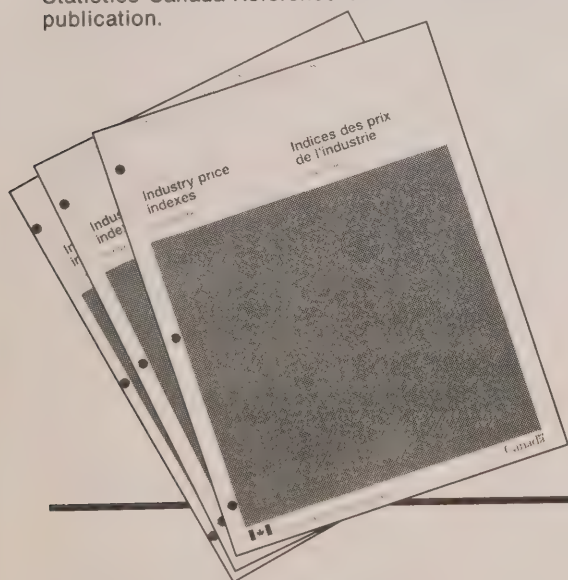

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail, **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$173 in Canada, and \$208 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

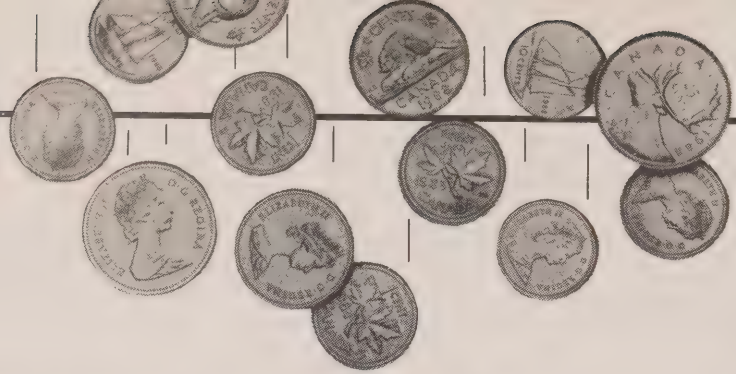

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 173 \$ au Canada et 208 \$ à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), the **Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- food
- clothing
- housing
- health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of changes.

Get the facts.

Subscribe to the **Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$89 in Canada, and \$107 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur :

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changements.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 89 \$ au Canada et 107 \$ à l'étranger.

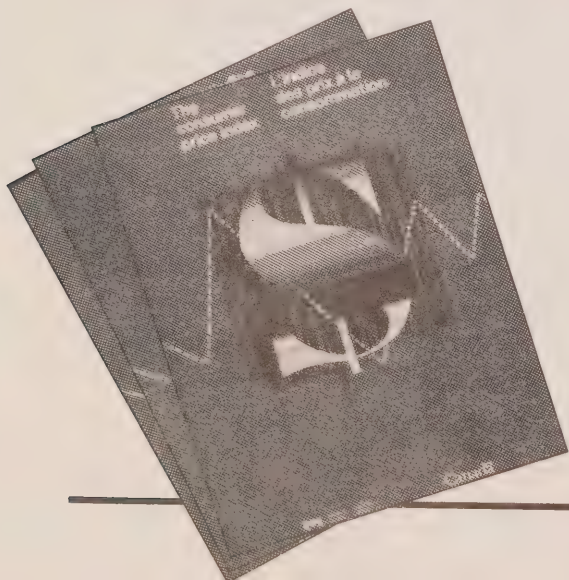

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).
